FOOD AND DRUG ADMINISTRATION CENTER FOR DRUGS AND BIOLOGICS APPROVED PRESCRIPTION DRUG PRODUCTS

with Therapeutic Equivalence Evaluations

PREFACE TO FIFTH EDITION

The Approved Prescription Drug Products with Therapeutic Equivalence Evaluations list (the List) identifies currently marketed prescription drug products approved on the basis of safety and effectiveness by the Food and Drug Administration (FDA). In addition, it contains therapeutic equivalence evaluations for the multisource approved drug products. These evaluations have been prepared to serve as public information and advice to State health agencies in the administration of their drug product selection laws, to promote public education in the area of drug product selection and to foster containment of health costs. Their presence in the publication does not impose any requirements or restrictions upon any person. Further, inclusion of products on the List is independent of any regulatory action through administrative or legal means against a drug product. The main criterion for inclusion of marketed products is their being the subject of an approved application. Also, information provided by the List is not intended to reflect the patent status of any of the drug products on the List.

Virtually all States have adopted laws intended to encourage or mandate the substitution of one product of a particular drug entity for another with the intent of saving money for the consumer and containing costs in drug procurement and medical reimbursement programs. These State laws generally require that either substitution be limited to drugs on a specific list (the positive formulary approach) or that substitution be permitted for all drugs except those prohibited by a particular list (the negative formulary approach).

A number of States sought the assistance of FDA in preparing both positive and negative formularies. For example, on January 23, 1978, FDA responded to a request from the New York State Health Department to evaluate their list of drug products for therapeutic equivalence. Subsequently, a similar evaluation was made of a list submitted by the State of Illinois. The basic policies applied in evaluating these lists for the States of New York and Illinois are identical to the policies applied in developing this List.

Because of the number of requests for assistance in developing drug lists from other States, it became apparent that FDA could not serve the needs of each

State on an individual basis. The Agency also recognized that providing a single list based on common policies would be preferable to evaluating drug products on the basis of differing definitions and criteria in various State laws. As a result, on May 31, 1978, the Commissioner of Food and Drugs sent a letter to officials of all States informing them of FDA's intention to prepare a list of all prescription drug products that are approved by FDA for safety and effectiveness and the Agency's evaluation for therapeutic equivalence, in the case of multisource products, that contain the same active ingredients and are identical in strength and dosage form.

The Approved Prescription Drug Products List, which was distributed as a proposal in January, 1979, included currently marketed prescription drug products approved by FDA through new drug applications or abbreviated new drug applications under the provisions of section 505 of the Federal Food, Drug, and Cosmetic Act (the act), or in the case of antibiotics, through analogous applications known as Forms 5 or 6 under section 507 of the act. In preparing the List, FDA initially drew from its computerized files of approved drug submissions. In order to minimize the potential for error, a list from FDA automated files of approved new drug applications as of April, 1978, was published as an interim document in May, 1978, and sent to State officials and agencies, including health officers, boards of pharmacy, and drug procurement agents, for review and comment. By notice published in the *Federal Register* of June 30, 1978 (43 FR 28557), the interim list was also made available to the public, with a request for additions, deletions, or corrections. In addition, on two separate occasions, FDA sent to each applicant data worksheets listing its products that FDA had identified as being approved, and corrections were solicited. The Agency received an excellent response with considerable updating information, indicating a serious and careful review by the firms. Information received in response to these requests was reviewed and, when applicable, was incorporated into the automated file. Information regarding approved antibiotic Form 6 (the antibiotic application analogous to the abbreviated new drug application) also was included.

The therapeutic equivalence evaluations in the List reflect FDA's application of specific criteria to the approved multisource drug products on the List. The evaluations are presented in the form of code letters that indicate the basis for the evaluation made. An explanation of the code appears in the *Introduction*. The List, including the therapeutic equivalence evaluations, was distributed in January, 1979, as a proposal so that interested persons could review and comment on it. The first publication, October, 1980, reflected corrections and additions made as a result of those comments received. This publication, October, 1984,

reflects all new approvals and data changes recorded since the first publication. Any product whose approval has been withdrawn or whose marketing has been discontinued has been removed from the List.

A complete discussion of the background and basis of FDA's therapeutic equivalence evaluation policy was published as a proposal in the *Federal Register* on January 2, 1979 (44 FR 2932). The final rule, which includes FDA's responses to the public comments received on the proposal, was published in the *Federal Register* on October 31, 1980 (45 FR 72582).

1. INTRODUCTION

1.1 Content and Exclusion

In addition to the list of approved prescription drug products and therapeutic equivalence evaluations, this publication also includes: an index of drug products by trade or generic name, an index of drug products by the name of the applicant (holder of the approved application), a list of applicants by an abbreviated name designation, and a list of uniform terms. The publication also has an Addendum which contains information on drugs pending effectiveness evaluation in the Drug Efficacy Study Implementation (DESI) review and a category of those drugs being evaluated for safety issues identified subsequent to 1962.

Several categories of products are excluded from the publication even though many may be marketed legally. These include: drug products marketed prior to 1938 that are not subject to the premarket clearance procedures of the law, OTC drug products, products that are known to be no longer marketed based on information furnished in the approved new drug applications, and approved drug products solely marketed abroad. Products approved as drugs but now regarded as medical devices, biologics, or foods also are excluded from the List.

As a general rule, the distributors of the products on the List are not identified. Because there is no requirement to immediately notify FDA when distributors shift their source of supply in the commercial marketplace, it is not possible to maintain an up-to-date and complete list linking the products of each approved application with the distributors and relabelers handling those products.

Exclusion of drug products from the List or the designation of therapeutic equivalence evaluations of drug products does not constitute determinations that any products are in violation of the act or that any products are preferable to others.

1.2 Therapeutic Equivalence-related Terms

Approved Prescription Drug Products—This term refers to currently marketed prescription drug products approved by FDA through new drug applications (NDAs), abbreviated new drug applications (ANDAs) under the provisions of section 505, or in the case of antibiotics, through analogous applications known as Forms 5 or 6 under section 507 of the Federal Food, Drug, and Cosmetic Act (the act). All drug products on the List have been fully reviewed and approved for safety and effectiveness by FDA. The law also permits

drugs to be legally marketed without such fully approved applications under certain circumstances, but the drugs so marketed do not appear on the List (see Section 1.1).

Pharmaceutical Equivalents—Drug products are considered to be pharmaceutical equivalents if they contain the same active ingredients and are identical in strength or concentration, dosage form, and route of administration (e.g., chlorthalidone hydrochloride, 5mg oral capsules). Pharmaceutically equivalent drug products are formulated to contain the same amount of active ingredient in the same dosage form and to meet the same or comparable standards (i.e., identity, strength, purity, and quality), but they may differ in characteristics such as color, flavor, shape, packaging, preservatives, expiration time, and, within certain limits, labeling.

Pharmaceutical Alternatives—Drug products are considered to be pharmaceutical alternatives if they contain the same therapeutic moiety but differ in the salt or ester of that moiety or in the dosage form or strength (e.g., tetracycline hydrochloride, 250mg capsules vs. tetracycline phosphate complex, 250mg capsules). Different dosage forms and strengths within a product line by a single manufacturer are thus pharmaceutical alternatives, as are controlled release products when compared with conventional formulations of the same active ingredient.

Therapeutic Equivalents—Drug products considered to be therapeutic equivalents are pharmaceutical equivalents and can be expected to have the same therapeutic effect when administered to patients under the conditions specified in the labeling. The concept of therapeutic equivalence, as used in developing the List, applies only to products containing the same active ingredients and does not encompass a comparison of different therapeutic agents used for the same condition (e.g., propoxyphene hydrochloride vs. pentazocine hydrochloride for the treatment of pain). FDA evaluates as therapeutically equivalent those drug products that meet the following general criteria: (1) They are pharmaceutical equivalents in that they (a) contain identical amounts of the same active drug ingredient in the same dosage form, and (b) meet compendial or other applicable standards of identity, strength, purity, and quality; (2) they are bioequivalent in that (a) they do not present a known or potential bioequivalence problem, or (b) if they do present such a known or potential problem, they are shown to meet an appropriate bioequivalence standard; (3) they are adequately labeled; and (4) they are manufactured in compliance with Current Good Manufacturing

Practice regulations.

FDA considers drug products to be therapeutically equivalent if they meet the criteria outlined above, even though they may differ in certain other characteristics, e.g., color, flavor, packaging, preservatives, expiration time, and minor aspects of labeling. When such differences are important in the care of a particular patient, it is appropriate for the prescribing physician to require that a particular brand be dispensed as a medical necessity. As long as this consideration is met, however, FDA believes that products considered therapeutically equivalent can be substituted with the full expectation that the substituted product will produce the same therapeutic effect as the prescribed product.

Bioavailability—This term means the rate and extent to which the active drug ingredient or therapeutic moiety is absorbed from a drug product and becomes available at the site of drug action.

Bioequivalence—This term describes the situation where pharmaceutical equivalent or pharmaceutical alternative drug products display comparable bioavailability when studied under similar experimental conditions. That is, equivalent (molar) doses of the therapeutic component (moiety) of such drugs similarly studied are bioequivalent when their rate and extent of absorption are not significantly different. Bioequivalence also may be demonstrated using an *in vitro* bioequivalence standard when such an *in vitro* test has been correlated with human *in vivo* bioavailability data.

1.3 General Policies and Legal Status

General policies governing the List. The fundamental policy governing the List is that FDA considers pharmaceutically equivalent drug products to be therapeutically equivalent provided they are approved for both safety and effectiveness, are manufactured in accordance with Current Good Manufacturing Practice regulations, meet the same or equivalent standards, and, in those instances where positive evidence of bioavailability is necessary, are shown to be bioequivalent to an appropriate standard. The Agency believes this policy is consistent with the prevailing opinion of experts and with general experience in the marketplace through the years.

The Agency has considered, and rejected, the option of requiring *in vivo* bioequivalence studies for every product. Such a policy would result in the testing in humans of a large number of products for which there is no evidence of a bioequivalence problem, and would thereby expose human subjects unnecessarily to the rigor of clinical testing and waste the nation's clinical research resources on the repetitive testing of drug

products for little or no scientific purpose. For this reason, FDA has elected under its bioavailability and bioequivalence regulations to confine *in vivo* testing of products for bioequivalence to those particular drugs for which such testing is scientifically and medically necessary. In considering the therapeutic equivalence of drugs with known or potential bioavailability problems, the Agency has followed a policy of evaluating as therapeutically equivalent only those products that have met current requirements (*in vivo* testing in humans, *in vitro* dissolution rate requirements, or both, depending on the drug). When bioavailability or bioequivalence requirements are newly established for drugs raised to the effective status or for products determined to be new drugs for the first time, there is a transition period during which all manufacturers are required to submit information regarding their products. For this reason some manufacturers whose products may not have met the requirement yet are still legally marketed.

Legal status of the List. The List contains only public information and advice. The List is not a recommendation as to which drug products persons should purchase, prescribe, dispense, or, conversely, which products should be avoided. It does not impose any requirement or restriction upon any person. To the extent that the List identifies drug products approved for marketing under sections 505 and 507 of the Federal Food, Drug, and Cosmetic Act, it merely sets forth information to which the public is entitled under the Freedom of Information Act. Exclusion of a drug product from the List does not necessarily mean that the drug product is in violation of sections 505 and 507 of the act, or that it is not safe or effective, or that it may not be therapeutically equivalent to other drug products. Rather, the exclusion is based on the fact that FDA has not evaluated the safety, effectiveness, and quality of the drug product. To the extent that the List sets forth FDA's evaluations of the therapeutic equivalence of drug products that have been approved, it contains FDA's advice to the public and to the States regarding an important public health matter. These evaluations do not constitute determinations that any products are in violation of the act or that any products are preferable to others. As explained in the *Federal Register* proposal of January 12, 1979 (44 FR 2932), these evaluations are based on the application of certain criteria to information contained in FDA files to make these nonregulatory evaluations.

1.4 Precautions

Need for usual professional care and performance in using the List. The evaluations of therapeutic equivalence in this List are scientific and medical evaluations

by FDA. Products evaluated as therapeutically equivalent can be expected, in the judgment of the FDA, to have equivalent therapeutic effect and equivalent potential for adverse effects when used under the conditions of their labeling. However, these products may differ in other characteristics such as, for example, color, flavor, shape, packaging, preservatives, expiration date, and, in some instances, labeling. If such products are substituted for each other, there is a potential for such problems as patient confusion due to differences in color or shape of tablets, less patient acceptance of certain products because of flavor, better stability of one product over another under adverse conditions of storage, allergic reactions in rare cases due to a coloring ingredient, as well as differences in purchase price to the patient. An FDA evaluation of therapeutic equivalence in no way relieves practitioners of their professional responsibilities in prescribing and dispensing such products with due care and with appropriate information to individual patients. In those uncommon circumstances where the characteristics of a specific product, other than its active ingredient, are important in the therapy of a particular patient, the physician's specification of that product is appropriate. Pharmacists must also be familiar with the expiration dates and labeling conditions for storage, particularly for reconstituted products, to assure that patients are properly advised when one product is substituted for another.

Only currently marketed prescription drug products are included on the List. The List includes only those prescription drug products that have been approved under sections 505 and 507 of the act, and which Agency records show are currently being marketed according to information furnished in the new drug application. An approved drug product is regarded as marketed if it is available for retail and/or wholesale distribution regardless of whether it is currently being manufactured. Adequately notified, FDA will remove from the List any drug product which is no longer being marketed, even though there remains an approved application for that product. However, unmarketed products may periodically appear on the List until FDA becomes aware of their non-marketed status. Conversely, when FDA becomes aware through the application review process that an approved drug product is being re-marketed, the product again will be included on the List. The monthly Cumulative Supplement to the List is used to indicate what products have been added to or removed from the List. An approved drug product will not be listed if the applicant indicates there is no intent to market the drug.

Multisource and single source drug products are included on the List. In constructing the List, FDA has evaluated for therapeutic equivalence only multisource

drug products, which in virtually all instances means those pharmaceutical equivalents available from more than one manufacturer. For all multisource products a therapeutic equivalence code is included and, in addition, those products which are therapeutically equivalent are highlighted in bold face and underlined. Those products with approved applications that are single source (i.e., there is only one approved product available for that active ingredient and dosage form) are also included on the List for the sake of completeness, but no therapeutic equivalence code is included with such products. The details of these codes and the policies underlying them are discussed in Section 1.5 and Appendix D.

It should also be noted that when FDA is aware of new information concerning a multisource drug product on the List that causes its therapeutic equivalence evaluation to change, the designation will be changed in the next monthly Cumulative Supplement to the List.

Products on the List are identified by the names of holders of approved applications (applicants). The products on the List are identified by the names of the holders of approved applications (applicants) rather than by the names of the actual manufacturers themselves. This is because the applicant may have had, for example, its product manufactured by a contract manufacturer and may simply be distributing the product for which it has obtained approval. In most instances, however, the manufacturer of the product is the applicant.

Although the products on the List are identified by the names of the applicants, several circumstances, such as changing corporate profiles, have made this determination a difficult one. The Agency believes that, based on intensive and continuing document reviews and on concurrence through communication with firms, the applicant designations on the List, in most cases, are correct.

To assist the user in relating firm and product identity information on the product label to that on the List, the following should be noted. If the applicant (firm name in the new drug application) is the marketer (firm name on the label), that name appears on the List. If the applicant is not the marketer, the information appearing on the List depends upon the existence of a corporate relationship between the firm named on the List and that on the label. When the Agency is aware of a corporate relationship, the name of the marketer and the trade name of the drug product (generic name if no trade name exists) appear on the List. If the Agency is unaware of a corporate relationship between the non-marketing applicant and the marketer, the applicant's name appears on the List accompanied by the generic name of the drug product.

As a general rule, the products on the List are not identified by the names of the distributors of those products. FDA does not believe that there is a feasible way to maintain an up-to-date and complete list linking the products of each approved application with the distributors and relabelers handling those products. Products subject to an approved application are frequently manufactured for distributors for marketing under the distributor's labeling. Because there is no requirement to notify FDA when distributors shift their source of supply in the commercial marketplace, even if FDA were to attempt to expand the List to link distributors with applicants, it would not have ready access to the information necessary to do so.

Any product on the List is subject at all times to regulatory action. From time to time approved products may be found to be in violation of one or more requirements of the Federal Food, Drug, and Cosmetic Act. In such circumstances, the Agency will commence appropriate enforcement action to remove the violative product from the market by voluntary recall or seizure. If the problem leading to the violation remains uncorrected, so that noncomplying products continue to enter the market, FDA will undertake steps to eliminate that risk (e.g., by court injunction or withdrawal of the approval of the application). Where additional preventive action is indicated, the Agency will utilize appropriate legal procedures to keep the product off the market. Such regulatory action, however, is independent of the inclusion of products on the List. The sole criterion for inclusion of marketed products on the List is their being the subject of an approved application. FDA believes that retention of a violative product on the List will not have any significant adverse health consequences because other legal mechanisms are available to the Agency to prevent actual marketing of violative products.

It should also be noted that when FDA is aware of new information concerning a multisource drug product on the List that causes its therapeutic equivalence evaluation to change, the designation will be changed in the next monthly Cumulative Supplement to the List.

Patent status of drug products not considered. The patent laws have no bearing on the enforcement of the Federal Food, Drug, and Cosmetic Act, and the Agency does not consider these laws when reviewing new drug applications and making drug product approval decisions. Thus, if a firm submits a new drug application for a drug that is patented by another firm, FDA reviews the application without considering the patent issue. If the application is approvable, the existence of a patent does not affect the Agency's decision to grant approval for marketing.

For the same reasons, the patent status of approved

prescription drug products is not considered by the Agency in determining whether such products appear on the List. Therefore, the information provided by the List is not intended to reflect the patent status of any of the drug products on the List.

1.5 Therapeutic Equivalence Evaluations

The coding system for therapeutic equivalence evaluations is constructed to allow users to determine quickly whether the Agency has evaluated a particular approved product as therapeutically equivalent to other pharmaceutically equivalent products. The coding system is also intended to provide specific information on the basis for FDA's evaluations. The two basic classification categories into which multisource drugs have been placed are as follows:

- A—Drug products that FDA considers to be therapeutically equivalent to other pharmaceutically equivalent products.**
- B—Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products.**

A two-letter code is used in the List. The first letter is the basic classification ("A" or "B") to which an individual drug product has been assigned. The second letter designates a more specific reason for placing the individual product in that category.

Drug products designated with an "A" code fall under one of two major main policies:

- (1) No known or suspected bioequivalence problems (designated AA, AN, AO, AP, or AT, depending on the dosage form); and
- (2) Actual or potential bioequivalence problems resolved with adequate *in vivo* and/or *in vitro* evidence supporting bioequivalence (designated AB).

Drug products designated with a "B" code have the following characteristic:

Actual or potential bioequivalence problems unresolved by adequate evidence of bioequivalence (designated BC, BD, BE, BN, BP, BR, BS, BT, or BX). Often the problem is among specific dosage forms rather than with the active ingredients.

The codes are explained further in Appendix D.

1.6 Description of Special Situations

Certain drugs present special situations that deserve a more complete explanation than can be provided by the two-letter codes used in the List. These drugs have particular problems with standards of identity, analytical methodology, or bioequivalence issues that are in the process of resolution. The following are in this category:

Conjugated Estrogen and Esterified Estrogen Tablets—Data have been submitted to FDA indicating that there are significant differences in blood levels of the active ingredients produced by different conjugated estrogen tablets. These differences are believed to be directly related to the wide range of differences permitted by the current official standards in the several active estrogenic steroids in conjugated estrogen products. Because of the wide range of the same active estrogenic steroids in esterified estrogens, this same concern extends to these products as well. The USP has proposed to revise the standards of identity for conjugated and esterified estrogens. Until such time as the standards issue is resolved, however, FDA is unable to conclude that conjugated estrogen or esterified estrogen tablets produced by different manufacturers are necessarily pharmaceutical equivalents. These products have thus been coded **BS**.

Erythromycin Stearate Tablets—All manufacturers of erythromycin stearate tableted products demonstrated the bioequivalency of their products as a condition of application approval. These bioequivalence studies were performed under fasting conditions and, as a result, all firms were required to label their products to be taken on an empty stomach. Since that time some firms have demonstrated that their products also may be taken immediately before meals, but not with meals, and still achieve acceptable blood levels. On the basis of such studies, FDA has approved those products to be labeled accordingly. At the same time, the Agency stresses that optimal absorption for any erythromycin stearate tablet is achieved when the drug is administered under fasting conditions, and recommends that prescriptions include instructions regarding administration in relation to meals. When erythromycin stearate tablets are to be administered under fasting conditions, the Agency believes that any listed brand coded **AB** may be considered therapeutically equivalent. If erythromycin stearate is to be taken immediately before meals, only those products with labeling that provides for such administration should be dispensed. Erythromycin stearate tableted products have been designated therapeutically equivalent (**AB**) in the List because all of the products produce equivalent blood levels provided the drug is prescribed and administered in accordance with the conditions of use

in the labeling. Prescribers and dispensers are advised to be familiar with the labeling of these products.

Amino Acid and Protein Hydrolysate Injections—These products differ by the amount and kinds of amino acids they contain and therefore are not considered pharmaceutical equivalents. Thus, it is on this basis that FDA cannot evaluate these products as therapeutic equivalents. At the same time, the Agency believes that it is appropriate to point out that where nitrogen balance is the sole therapeutic objective and individual amino acid content is not a consideration, pharmaceutical alternative products with the same total amount of nitrogen content may be considered as therapeutically equivalent.

Prednisone Tablets—Because of known bioinequivalence and therapeutic inequivalence, the USP has adopted an *in vitro* dissolution test correlated with *in vivo* bioequivalence data. All products have been subject to a voluntary batch-to-batch certification program over the last several years to assure that products are in compliance with the USP dissolution requirement. Based on *in vivo* studies, FDA has published a proposal to establish the USP dissolution requirement as the bioequivalence requirement for prednisone tableted products. Further, additional studies have been completed and the data are still under evaluation. Determination of therapeutic equivalence for prednisone tableted products will be made after the evaluation of those studies. Until then, all prednisone products are coded **BX**.

Prednisolone Tablets—Although FDA-sponsored biopharmaceutic studies of prednisolone tablets have not revealed product bioinequivalence, a determination of the therapeutic equivalence of prednisolone tablets will not be made at present because of the close similarities between prednisolone and prednisone. Based on *in vivo* and *in vitro* studies, FDA has published a proposal to establish the dissolution requirement as the bioequivalence requirement for prednisolone tableted products. Determination of therapeutic equivalence will be considered further after evaluation of the prednisone studies. Until then, all prednisolone products are coded **BX**.

Theophylline—Recent studies suggest that food may significantly increase the absorption of theophylline from some controlled-release theophylline drug products. Additional research is ongoing to define more precisely the relationship between the timing of meals (including type and amount of food) and the rate and extent of absorption of theophylline from the controlled-release dosage form. Until this issue is resolved, we will identify by a special note in the Cumulative Supplement of this publication those approved controlled-release theophylline drug products which have demonstrated through "biostudies" that food does not have

an appreciable effect on the rate and extent of theophylline absorption.

Two controlled-released theophylline tablets are listed as therapeutically equivalent (AB). Because one of these products was recently approved for once-daily dosing, it is important to be aware that the therapeutic equivalence rating was made on the basis of 12-hour dosing intervals. The rating does not apply to once-daily dosing. To date, no data have been submitted upon which the Agency can base a therapeutic equivalence determination among any of the approved theophylline controlled-release products when dosed once-daily.

1.7 Availability of the Publication and Updating Procedures

FDA provides monthly cumulative supplements furnishing, among other things, new drug approval information and, if necessary, revised therapeutic equivalence evaluations. All parts of this publication will be subject to any changes and additions made in the supplements. A complete updated List will be published on an annual basis, and each subscription will include all monthly supplements in a given publication year.

An updated magnetic tape is available quarterly by subscription from the U.S. Department of Commerce, National Technical Information Service, Springfield, VA 22161.

2. HOW TO USE THE DRUG PRODUCT LIST

2.1 Key Sections for Using the Drug Product List

This publication contains the Drug Product List along with illustrations, indices, and lists of abbreviations and terms which facilitate its use.

Drug Product List—The Drug Product List contains product identification information (active ingredients, dosage forms, routes of administration, product names, applicants, strengths) for single and multiple ingredient drug products arranged alphabetically by active ingredient. Also shown is the application number (FDA's file number) under which the particular drug product was approved.

If a product is available from more than one source (multisource), as a rule a therapeutic equivalence code will appear in front of the applicant's name. If a product is therapeutically equivalent to one or more products or to an appropriate reference, it will be designated with a code beginning with "A" and the entry will be underlined and printed in bold font for emphasis.

Active ingredients in multiple ingredient (combination) products are arranged alphabetically. For example, information for the product labeled methyl dopa and chlorothiazide appears listed under *Chlorothiazide; Methyl dopa*. A cross-reference to the product information appears for each active ingredient in the product. For combination products, the ingredient strengths are separated by semicolons and appear in the same relative sequence as do the ingredients in the heading. Available strengths of a dosage form from an ap-

plicant appear on separate lines.

To use the Drug Product List, determine the ingredient under which the product information is listed, using the Product Name Index if appropriate. Then, find the ingredient in the Drug Product List. Proceed to the dosage form and route of administration and compare products within that heading only. Therapeutic equivalence or inequivalence is determined on the basis of the therapeutic equivalence codes provided within that specific dosage form heading.

Illustrations—The annotated "Drug Product Illustration" and "Therapeutic Equivalence Evaluations Illustration" are offered to provide further clarification.

Product Name Index—This is an index of products by name. The product name encumbers products identified by generic or trade name. The second term of each entry indicates the ingredient under which product information can be found in the Drug Product List.

Product Name Index Listed by Applicant—This is an index of products by applicant name. The second term of each entry indicates the first alphabetically arranged ingredient under which product information can be found in the Drug Product List.

Applicant Name Abbreviations—This is a list of the applicant name abbreviations used in this publication.

Uniform Terms—To improve readability, uniform terms are used to designate dosage forms, routes of administration, and abbreviations used to express strengths. In some cases, the terms used may differ from those used in product labels and other labeling.

With Cross-Reference

NOTE: These examples are for purposes of illustration only. They do not represent actual products from the Drug Product List.

2.3 THERAPEUTIC EQUIVALENCE EVALUATIONS ILLUSTRATION

Drug products coded **AB** (or any code beginning with an "A") under an ingredient and dosage form heading are considered therapeutically equivalent only to other products coded **AB** (or any code beginning with an "A") and **NOT** to those coded **BP** (or any code beginning with a "B") and any products not listed. Drug products coded **BP** (or any code beginning with a "B") are **NOT** considered therapeutically equivalent to any other product. For a complete explanation of the TE codes refer to Section 1.5 of the *Introduction* and Appendix D.

<u>SULFASALAZINE</u>

ACETAMINOPHEN W/ CODEINE, ACETAMINOPHEN
 BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
 CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
 DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
 H-CORT, HYDROCORTISONE
 PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
 THEOPHYLLINE, THEOPHYLLINE
 TRIPROLIDINE HCL, TRIPROLIDINE HYDROCHLORIDE

PHOENIX LABORATORIES

AMINOPHYLLINE, AMINOPHYLLINE
 BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
 CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
 DEXAMETHASONE, DEXAMETHASONE
 FOLIC ACID, FOLIC ACID
 ISONIAZID, ISONIAZID
 PREDNISOLONE, PREDNISOLONE
 PREDNISONE, PREDNISONE
 QUINIDINE SULFATE, QUINIDINE SULFATE

PHYSICIANS PRODS/ILC

HYSERPIN, RAUWOLFIA SERPENTINA

PICKER

DIONOSIL AQUEOUS, PROPYLIDONE
 DIONOSIL OILY, PROPYLIDONE

PIONEER PHARMS

BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
 CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
 CYPROHEPTADINE HCL, CYPROHEPTADINE HYDROCHLORIDE

PLANTEK/IKAPHARM

CLOMIPHENE CITRATE, CLOMIPHENE CITRATE

PRIVATE FORMULATIONS

BENZTHIAZIDE, BENZTHIAZIDE
 BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
 CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
 CHLORPROMAZINE HCL, CHLORPROMAZINE HYDROCHLORIDE
 CONJUGATED ESTROGENS, ESTROGENS, CONJUGATED
 DEXAMETHASONE, DEXAMETHASONE
 DI-METREX, PHENDIMETRAZINE TARTRATE
 DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
 DIPHENOXYLATE HCL W/ ATROPINE SULFATE, ATROPINE SULFATE
 ESTERIFIED ESTROGENS, ESTROGENS, ESTERIFIED
 FEMOGEN, ESTROGENS, ESTERIFIED
 FOLIC ACID, FOLIC ACID
 HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
 MEPROBAMATE, MEPROBAMATE
 METHSCOPOLAMINE BROMIDE, METHSCOPOLAMINE BROMIDE
 METHYLTESTOSTERONE, METHYLTESTOSTERONE
 PHENDIMETRAZINE TARTRATE, PHENDIMETRAZINE TARTRATE
 PREDNISOLONE, PREDNISOLONE
 PREDNISONE, PREDNISONE
 PROMETHAZINE HCL, PROMETHAZINE HYDROCHLORIDE
 PROPANTHELINE BROMIDE, PROPANTHELINE BROMIDE
 PROPOXYPHENE HCL, PROPOXYPHENE HYDROCHLORIDE
 QUINIDINE SULFATE, QUINIDINE SULFATE
 RAUWOLFIA SERPENTINA, RAUWOLFIA SERPENTINA
 RESERPINE, RESERPINE

PRO DISPOSABLES

HEXASCRUB, HEXACHLOROPHENE

PROCTER AND GAMBLE

OSTEOSCAN-HDP, TECHNETIUM, TC-99M, OXIDRONATE KIT
 TOPICYCLINE, TETRACYCLINE HYDROCHLORIDE

**APPENDIX B
PRODUCT NAME INDEX LISTED BY APPLICANT**

PROTER LAB/ITALY

OXYTETRACYCLINE HCL, OXYTETRACYCLINE HYDROCHLORIDE

PURDUE FREDERICK

ATHROMBIN, WARFARIN SODIUM
ATHROMBIN-K, WARFARIN POTASSIUM
CARDIOQUIN, QUINIDINE POLYGALACTURONATE
CERUMENEX, TRIETHANOLAMINE POLYPEPTIDE OLEATE CONDENSATE
PHENY-PAS-TEBAMIN, PHENYL AMINOSALICYLATE
PHYLOCONTIN, AMINOPHYLLINE
PRIODERM, MALATHION
SULFABID, SULFAPHENAZOLE
THEOCONTIN, THEOPHYLLINE
UNIPHYL, THEOPHYLLINE

PUREPAC/KALIPHARMA

ACETAMINOPHEN W/ CODEINE PHOSPHATE, ACETAMINOPHEN
AMINOPHYLLINE, AMINOPHYLLINE
AMITRIPTYLINE HCL, AMITRIPTYLINE HYDROCHLORIDE
AMPICILLIN TRIHYDRATE, AMPICILLIN/AMPICILLIN TRIHYDRATE
ASPIRIN AND CAFFEINE W/ BUTALBITAL, ASPIRIN
BROMPHENIRAMINE MALEATE, BROMPHENIRAMINE MALEATE
CHLORDIAZEPOXIDE HCL, CHLORDIAZEPOXIDE HYDROCHLORIDE
CHLOROQUINE PHOSPHATE, CHLOROQUINE PHOSPHATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CHLORPROMAZINE HCL, CHLORPROMAZINE HYDROCHLORIDE
CHLORTHALIDONE, CHLORTHALIDONE
CORTISONE ACETATE, CORTISONE ACETATE
DEXTROAMPHETAMINE SULFATE, DEXTROAMPHETAMINE SULFATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
DOXYCYCLINE HYCLATE, DOXYCYCLINE HYCLATE
ERYTHROMYCIN STEARATE, ERYTHROMYCIN STEARATE
FOLIC ACID, FOLIC ACID
HYDRALAZINE HCL, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCORTISONE, HYDROCORTISONE
HYDROCORTISONE ACETATE, HYDROCORTISONE ACETATE
ISONIAZID, ISONIAZID
MEPROBAMATE, MEPROBAMATE
METHOCARBAMOL, METHOCARBAMOL
METHYLTESTOSTERONE, METHYLTESTOSTERONE
NIACIN, NIACIN
OXYTETRACYCLINE HCL, OXYTETRACYCLINE HYDROCHLORIDE
PENICILLIN G POTASSIUM, PENICILLIN G POTASSIUM
PENICILLIN V POTASSIUM, PENICILLIN V POTASSIUM

PREDNISOLONE, PREDNISOLONE

PREDNISONE, PREDNISONE

PROPOXYPHENE HCL, PROPOXYPHENE HYDROCHLORIDE

PROPYLTHIOURACIL, PROPYLTHIOURACIL

QUINIDINE SULFATE, QUINIDINE SULFATE

RAUWOLFIA SERPENTINA, RAUWOLFIA SERPENTINA

RESERPINE, RESERPINE

SECOBARBITAL SODIUM, SECOBARBITAL SODIUM

SODIUM PENTOBARBITAL, PENTOBARBITAL SODIUM

SPIRONOLACTONE, SPIRONOLACTONE

SPIRONOLACTONE W/ HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE

SULFISOXAZOLE, SULFISOXAZOLE

TETRACYCLINE HCL, TETRACYCLINE

TETRACYCLINE HCL, TETRACYCLINE HYDROCHLORIDE

TRIAMCINOLONE, TRIAMCINOLONE

TRIPLE SULFA, TRISULFAPYRIMIDINES

** Q **

QUANTUM PHARMICS

BENZTROPINE MESYLATE, BENZTROPINE MESYLATE
CHLORPHENIRAMINE MALEATE, CHLORPHENIRAMINE MALEATE
CORTISONE ACETATE, CORTISONE ACETATE
DIPHENHYDRAMINE HCL, DIPHENHYDRAMINE HYDROCHLORIDE
HYDRALAZINE HCL, HYDRALAZINE HYDROCHLORIDE
HYDROCHLOROTHIAZIDE, HYDROCHLOROTHIAZIDE
HYDROCORTISONE, HYDROCORTISONE
MEPROBAMATE, MEPROBAMATE
MEPROGESIC Q, ASPIRIN
NITROFURANTOIN, NITROFURANTOIN
NYSTATIN, NYSTATIN
PREDNISOLONE, PREDNISOLONE
PREDNISONE, PREDNISONE
QUINIDINE SULFATE, QUINIDINE SULFATE

APPENDIX D

THERAPEUTIC EQUIVALENCE EVALUATION CODES

Individual drug products have been evaluated as therapeutically equivalent in accordance with the definitions and policies outlined below.

A—Drug products that are considered to be therapeutically equivalent to other pharmaceutically equivalent products.

Drug products designated with an "A" code fall under one of two main policies: (1) For those active ingredients for which no bioequivalence issue is known or suspected, the therapeutic equivalence of pharmaceutically equivalent products is presumed, so long as the products are manufactured in accordance with Current Good Manufacturing Practice regulations and meet the other requirements of their approved applications (these are designated **AA**, **AN**, **AO**, **AP**, or **AT**, depending on the dosage form, as described below); and (2) for those DESI drug products containing active ingredients which have been identified by FDA as having actual or potential bioequivalence problems (21 CFR 320.22 or January 7, 1977 (42 FR 1648); revised July 14, 1981) and most post-1962 drug products, an evaluation of therapeutic equivalence is assigned to pharmaceutical equivalents only if the approved new drug application (NDA) contains adequate scientific evidence supporting the bioequivalence of the product to a selected standard product. This evidence may be an *in vivo* bioavailability study or an *in vitro* dissolution rate study or both, depending upon the drug (these are designated **AB**).

There are some general principles which may affect the substitution of pharmaceutically equivalent products in some specific cases. Prescribers and dispensers of drugs should be alert to these principles so as to deal appropriately with situations which require professional judgment and discretion.

There may be labeling differences among pharmaceutically equivalent products which require attention on the part of the health professional. For example, pharmaceutically equivalent powders to be reconstituted for administration as oral or injectable liquids may vary with respect to their expiration time or storage conditions after reconstitution. An FDA evaluation that such products are therapeutically equivalent is applicable only when such products are reconstituted, stored, and used under the conditions specified in the labeling of each product.

Occasionally there may be variations among pharmaceutically equivalent products in the labeling instructions on dose and administration. For example, a particular brand of an antibiotic might require admin-

istration on an empty stomach, while another brand might permit administration without regard to food intake on the basis of blood level studies done after administration in the presence of food. An FDA evaluation of therapeutic equivalence in such cases is applicable only when such products are taken in accordance with labeling directions for the particular product.

In some cases closely related products are listed as containing the same active ingredients but in somewhat different amounts. In determining which of these products are pharmaceutically equivalent, the Agency has employed a criterion that products with labeled strengths of an ingredient that do not vary by more than 1% will be considered pharmaceutically equivalent.

Different salts and esters of the same therapeutic moiety are regarded as pharmaceutical alternatives. Such products are not considered to be therapeutically equivalent. There are no known instances in this List where pharmaceutical alternatives are coded as therapeutically equivalent. Anhydrous and hydrated entities are not considered as pharmaceutical equivalents unless they meet the same standards and, as in the case of ampicillin, their equivalence is supported by appropriate bioavailability/bioequivalence studies where necessary.

Drug products that are solids for reconstitution, diluted solutions, or concentrated solutions, and that contain different concentrations of active ingredients, are not considered pharmaceutical equivalents. Of course, the exercise of accepted professional practice may render pharmaceutically different concentrations into pharmaceutical equivalents (e.g., concentrated solutions may be diluted to lower strengths by using proper procedures designed to maintain the quality of the product).

Where package size variations have therapeutic implications, products so packaged have not been considered pharmaceutically equivalent. For example, some oral contraceptives are supplied in 21-tablet and 28-tablet packets; the 28-tablet packets contain 7 placebo or iron tablets. These two packaging configurations are not regarded as pharmaceutically equivalent; thus, they are not designated as therapeutically equivalent.

Preservatives may differ among some therapeutically equivalent drug products. FDA's evaluations of therapeutic equivalence does not consider preservatives.

The specific sub-codes for those drugs evaluated as therapeutically equivalent and the policies underlying these codes follow:

AA**Products not presenting bioequivalence problems in conventional dosage forms**

Products coded as **AA** are active ingredients and dosage forms that are not regarded as presenting either actual or potential bioequivalence problems or drug quality or standards issues.

AB**Products meeting necessary bioequivalence requirements**

The **AB** evaluation denotes products that contain an active ingredient in a dosage form that is subject to a bioequivalence requirement, or for which the submission of bioavailability or clinical data are required for approval or to permit therapeutic equivalence evaluations, and for which the applicant has provided adequate studies to support the bioavailability and bioequivalence of its product. Products will be coded **AB** if bioequivalence is demonstrated even if the study currently is not required for approval. This category also includes those few drugs with more than one applicant but only one manufacturer. It should be noted that if only one product under a drug ingredient heading is coded **AB**, it signifies that only that product is supported by bioavailability data. It does not signify that this product is therapeutically equivalent to the other drugs under the same heading. Thus, one product of a drug ingredient heading, coded **AB**, is not therapeutically equivalent to a drug product under the same heading that is coded **BD**, **BP**, or **BT**. Only those drugs coded **AB** under the ingredient heading are considered therapeutically equivalent to each other.

AN**Solutions and powders for aerosolization**

Uncertainty regarding the therapeutic equivalence of aerosolized products arises primarily because of differences in the drug delivery system. Powders or solutions for aerosolization which are marketed for use in any of several delivery systems are considered to be pharmaceutically and therapeutically equivalent and are coded **AN**. Those products compatible only with, or which are a component of, a specific delivery system are classified **BN**, because drug products in their respective delivery systems are not necessarily pharmaceutically

equivalent and therefore not therapeutically equivalent.

AO**Injectable oil solutions**

The absorption of drugs in injectable oil solutions may vary substantially with the type of oil employed as a vehicle and the concentration of the active ingredient. Injectable oil solutions are therefore considered to be pharmaceutically and therapeutically equivalent only when the active ingredient, its concentration, and the type of oil used as a vehicle all are identical.

AP**Aqueous injectable (parenteral) solutions**

All injectable products are listed under the general category *Injectable; Injection*, but specific routes of administration are not shown. Some multi-source products that are pharmaceutical equivalents are labeled by their different applicants for different routes of administration. Moreover, injectable products evaluated as therapeutically equivalent may have different preservatives. Injectable products available as dry powders for reconstitution, concentrated sterile solutions for dilution, or sterile solutions ready for injection, are all considered to be pharmaceutically and therapeutically equivalent provided they are designed to produce the same concentration for injection and are similarly labeled. Consistent with accepted professional practice, it is the responsibility of the prescriber, dispenser, or individual administering the product to be familiar with a product's labeling to assure that it is given only by the route(s) of administration stated in the labeling.

Certain commonly used large volume intravenous products in glass containers are not included on the List (e.g., dextrose 5% with water, dextrose 10% with water, sodium chloride 0.9% injection). Virtually all of these products first came on the market before 1938 and have not been required to obtain an approved NDA as a condition of marketing. When packaged in plastic containers, however, these same products are considered to be new drugs requiring approved NDAs for marketing. Approval then relies on the extent of the available safety data involving the specific plastic component of the product. All large volume parenteral products are manufactured under similar stand-

ards, regardless of whether they are packaged in glass or plastic. Thus, FDA has no reason to believe that the packaging container of large volume parenteral drug products that are pharmaceutically equivalent would have any effect on their therapeutic equivalence.

AT

Topical products

There are a variety of topical dosage forms available for dermatologic, ophthalmic, otic, rectal, and vaginal administration, including solutions, creams, ointments, gels, lotions, pastes, sprays, and some suppositories. Different topical dosage forms are not pharmaceutically equivalent even though they may contain the same active ingredient, and, therefore, they are not considered therapeutically equivalent. In the absence of contrary data, all DESI drug products in the same topical dosage form are considered therapeutically equivalent if they are pharmaceutically equivalent. However, applicants of post-1962 topical drug products, including "paper NDAs", either demonstrate the safety and efficacy of their product through clinical trials or through a bioequivalence study in order to be evaluated as therapeutically equivalent. Pharmaceutically equivalent topical products which raise questions of bioequivalence will be coded **AB** when supported by adequate bioavailability data and **BT** in the absence of such data.

B—Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products.

Certain multisource drugs appearing on the List have been classified with a "**B**" code for several reasons. One reason is exemplified by those active ingredients and dosage forms that have been identified by the Agency as having significant potential or actual bioequivalence differences and for which no adequate studies demonstrating the bioequivalence of the particular product have been submitted to FDA. Certain dosage forms, e.g., controlled release tablets, capsules, and injections frequently result in significant differences between products irrespective of active ingredients, and therefore, are classified in the "**B**" category. A "**B**" evaluation often is associated with bioequivalence problems concerning comparability among specific dosage forms rather than problems with the active ingredient (e.g., controlled release dosage forms). In addition, there are currently a few products

for which the standards are inadequate or for which FDA has insufficient information to determine if they are therapeutically equivalent.

The specific coding definitions and policies for the "**B**" sub-codes are as follows:

BC

Controlled release tablets, capsules, and injectables

Although bioavailability studies have been conducted on the majority of these dosage forms, they are subject to bioavailability differences, primarily because different firms developing controlled release products for the same active ingredient rarely employ the same approach to formulating their controlled release products. FDA, therefore, does not evaluate different controlled release dosage forms containing the same active ingredient in equal strength as bioequivalent unless equivalence between individual products has been specifically demonstrated through appropriate bioequivalence studies. Controlled release products for which acceptable bioequivalence data are available have been coded **AB**.

BD

Active ingredients and dosage forms with documented bioequivalence problems

The **BD** code denotes products containing active ingredients with known bioequivalence problems and for which adequate studies have not been submitted to FDA demonstrating the bioequivalence of the drug products. Where such studies are available, the product has been coded **AB**.

BE

Enteric coated oral dosage forms

Drug products in enteric coated dosage forms containing the same active ingredients are subject to significant differences in absorption. In general, such products cannot be considered pharmaceutically equivalent because they do not necessarily meet similar standards, and few manufacturers of enteric coated products have studied the pharmacokinetics of their products. Unless otherwise specifically noted, the Agency does not consider different enteric coated products containing the same active ingredients as bioequivalent. If studies have demonstrated the bioequivalence of enteric coated products, such products are coded **AB**.

BN**Products in aerosol-nebulizer drug delivery systems**

This code only applies to drug solutions or powders that are marketed only as a component of, or are only compatible with, a specific drug delivery system. There may be significant differences, for example, in the dose of drug and particle size delivered by different products. Therefore, such products are not regarded as pharmaceutically equivalent.

BP**Active ingredients and dosage forms with potential bioequivalence issues**

FDA's bioequivalence regulations (21 CFR 320.52) contain criteria and procedures for determining whether a specific active ingredient in a specific dosage form has a potential for causing a bioequivalence problem. It is FDA's policy to consider an ingredient meeting these criteria as having a potential bioequivalence problem even in the absence of positive data demonstrating inequivalence. Pharmaceutically equivalent products containing these ingredients in oral dosage forms are included in this category pending resolution of their bioequivalence or lack of it.

Injectable suspensions containing an active ingredient suspended in an aqueous or oleaginous vehicle have also been included in this sub-category. Injectable suspensions are subject to bioequivalence problems because differences in particle size, polymorphic structure of the suspended active ingredient, or the suspension formulation can significantly affect the rate of release and the rate of absorption. FDA does not consider pharmaceutical equivalents of these products as being bioequivalent without adequate evidence of bioequivalence being presented to the Agency.

BR**Suppositories or enemas for systemic use**

The absorption of active ingredients from suppositories or enemas that are intended to have a systemic effect (as contrasted with suppositories administered for local effect) can vary significantly

from product to product. Therefore, FDA considers pharmaceutically equivalent systemic suppositories or enemas as bioequivalent only if positive evidence of bioequivalence is available. In those cases where positive evidence is available, the product is coded **AB**. If such evidence is not available, the products are coded **BR**.

BS**Products having drug standard deficiencies**

If the drug standards for an active ingredient in a particular dosage form are found by FDA to be deficient so as to prevent an FDA evaluation of either pharmaceutical or therapeutic equivalence, all drug products containing that active ingredient in that dosage form are coded **BS**. For example, if the standards permit a wide variation in pharmacologically active components of the active ingredient such that pharmaceutical equivalence is in question, all products containing that active ingredient in that dosage form are coded **BS**.

BT**Topical products with bioequivalence issues**

This code applies mainly to post-1962 "paper NDA" dermatologic, ophthalmic, otic, rectal and vaginal products for topical administration, including creams, ointments, gels, lotions, pastes, and sprays, as well as suppositories not intended for systemic drug absorption. Topical products evaluated as having acceptable performance, but which are not bioequivalent to other pharmaceutically equivalent products or those lacking sufficient evidence of bioequivalence will be coded **BT**.

BX**Insufficient data**

The code **BX** is assigned to specific drug products for which the Agency has insufficient data to determine the therapeutic equivalence status under the policies stated in this document. In these situations the drug products are presumed to be inequivalent until adequate information becomes available to make a full evaluation of therapeutic equivalence.

DESI ADDENDUM

This Addendum identifying products reviewed under the Drug Efficacy Study Implementation (DESI) review contains the DESI Pending List which is made up of an "Exempt" (Court Order) category, a product name index to the "Exempt" (Court Order) category, and categories other than "Exempt" (Court Order). A description of the DESI Pending List and the definitions of the categories follow.

DESI Pending List—The DESI Pending List contains those drug products which have issues pending resolution of either safety or effectiveness. They were either originally passed for safety between 1938 and 1962 ("deemed approved") or were conditionally approved subsequently to 1962 as being identical, similar, or related to those drug products. They do not appear in the Drug Product List because they have not received a final determination of effectiveness under the DESI review, or were not eligible for review under DESI but are under evaluation by the Agency for safety issues. The "Exempt" (Court Order) category appears in the same format as the Drug Product List; the other categories are listed alphabetically by product name and include the applicant and all active ingredients listed alphabetically. Product identification information such as dosage form, routes of administration, and strengths are not given for non-"Exempt" (Court Order) drugs.

"Exempt" (Court Order)—Products that are subject to Paragraph XIV of Federal District Court Judge William B. Bryant's order as published in the *Federal Register* of December 14, 1972 (37 FR 26623). The majority of these products were first evaluated by the National Academy of Sciences, National Research Council (NAS/NRC) and then later all were evaluated by the Agency. These products were found to be less than effective, but a decision on whether to remove them from the market was deferred pending completion of additional clinical studies. In the meantime, drug products in several categories subject to Paragraph XIV of the order have received conditional approval subject to the demonstration of effectiveness of the particular active ingredients and dosage forms as identified in relevant regulations.

In this edition the "Exempt" (Court Order) category is expanded to include product identification information (dosage form, routes of administration, product names, applicants, strengths) for single and multiple ingredient drug products arranged alphabetically by active ingredient. No therapeutic equivalence

code is listed since no substitutability is implied. Whenever a *Federal Register* notification announces final withdrawal of specific products under a non-"Exempt" DESI category, product data will be provided. This additional information will be included as an aid to reviewers who need to know the specific products withdrawn by final action. The Cumulative Supplement will be the vehicle for identifying this expanded product information.

"Exempt" (Court Order) Product Name Index—This is an index of "Exempt" (Court Order) products by name. The second term of each entry indicates the first alphabetically arranged ingredient under which product information can be found in the "Exempt" (Court Order) category.

Probably Effective—Products that were first evaluated by NAS/NRC and then by the Agency. These products were found to be probably effective and required additional evidence to substantiate labeling claims. Although the proposed list published in January 1979, contained products in this category, these no longer exist because their effectiveness issues have been resolved.

Possibly Effective—Products that were first evaluated by NAS/NRC and then by the Agency. These products were found to be possibly effective and required additional evidence to substantiate labeling claims. Although the proposed List published in January 1979, contained products in this category, these no longer exist because their effectiveness issues have been resolved.

Ineffective—Products that were first evaluated by NAS/NRC and then by the Agency. These products have been found to lack evidence of effectiveness and are awaiting completion of administrative proceedings.

Ineffective as Combinations/New Safety Issue—Products that were first evaluated by NAS/NRC and then by the Agency. These products were found to lack substantial evidence of effectiveness as a fixed combination and present a safety issue. They are awaiting completion of administrative proceedings.

Effectiveness to be Determined—Products that were not reviewed by NAS/NRC and which are undergoing Agency evaluation for effectiveness.

Effective/New Safety Issue—Products that were determined to be effective but subsequently were found to present a new safety issue. These products are awaiting completion of administrative proceedings.
