Therapeutic Equivalence Evaluations

PREFACE TO TENTH EDITION

The *Approved Drug Products with Therapeutic Equivalence Evaluations* publication (the List) identifies currently marketed drug products approved on the basis of safety and effectiveness by the Food and Drug Administration (FDA) under the Federal Food, Drug, and Cosmetic Act (the Act). Unapproved drugs legally on the market (products still under DESI review or products not recognized by the Agency as new drugs) are not included in this publication. The main criterion for the inclusion of any product is that the product is the subject of an approved application that has not been withdrawn for safety or efficacy reasons. Inclusion of products on the List is independent of any current regulatory action through administrative or judicial means against a drug product. In addition, the List contains therapeutic equivalence evaluations for approved multisource prescription drug products. These evaluations have been prepared to serve as public information and advice to state health agencies and pharmacists to promote public education in the area of drug product selection and to foster containment of health costs. Therapeutic equivalence evaluations in this publication are not official FDA actions affecting the legal status of products under the Act.

Background of the Publication. In order to contain drug costs, virtually every state has adopted laws that encourage the substitution of drug products. These state laws generally require either that substitution be limited to drugs on a specific list (the positive formulary approach) or that it be permitted for all drugs except those prohibited by a particular list (the negative formulary approach). Because of numerous requests in the late 1970s for FDA assistance in preparing both positive and negative formularies, it became apparent that FDA could not serve the needs of each state on an individual basis. The Agency also recognized that providing a single list based on common policies would be preferable to evaluating drug products on the basis of differing definitions and criteria in various state laws. As a result, on May 31, 1978, the Commissioner of Food and Drugs sent a letter to officials of each state indicating FDA's intention to provide a list of all prescription drug products that are approved by FDA for safety and effectiveness, along with therapeutic equivalence determinations for multisource products.

The List was distributed as a proposal in January 1979. It included only currently marketed prescription drug products approved by FDA through new drug applications (NDAs) or abbreviated new drug applications (ANDAs) under the provisions of Section 505 or 507 of the Act.

The therapeutic equivalence evaluations in the List reflect FDA's application of specific criteria to the approved multisource prescription drug products on the List. These evaluations are presented in the form of code letters that indicate the basis for the evaluation made. An explanation of the code appears in the *Introduction.*

A complete discussion of the background and basis of FDA's therapeutic equivalence evaluation policy was published in the *Federal Register* on January 12, 1979 (44 FR 2932). The final rule, which includes FDA's responses to the public comments on the proposal, was published in the *Federal Register* on October 31, 1980 (45 FR 72582). The first publication, October 1980, of the final version of the List incorporated appropriate corrections and additions. Each subsequent edition has included the new approvals and made appropriate changes in data.

On September 24, 1984, the President signed into law the Drug Price Competition and Patent Term Restoration Act (1984 Amendments). The 1984 Amendments require that FDA, among other things, make publicly available a list of approved drug products with monthly supplements. The *Approved Drug Products with Therapeutic Equivalence Evaluations* publication and its monthly Cumulative Supplements satisfy this requirement. The Addendum to this publication identifies drugs that qualify under the 1984 Amendments for periods of exclusivity (during which ANDAs or applications described in Section 505(b)(2) of the Act for those drugs may not be submitted for a specified period of time and if allowed to be submitted would be approved with a delayed effective date) and provides patent information concerning the listed drugs. The Addendum also provides additional information that may be helpful to those submitting a new drug application to the Agency.

The Agency intends to use this publication to further its objective of obtaining input and comment on the publication itself and related Agency procedures. Therefore, if you have comments on how the publication can be improved, please send them to the Director, Division of Drug Information Resources, Center for Drug Evaluation and Research, HFD-80, 5600 Fishers Lane, Rockville, MD 20857. Comments received are publicly available to the extent allowable under the Freedom of Information regulations.

1. INTRODUCTION

1.1 Content and Exclusion

The List is composed of four parts: approved prescription drug products with therapeutic equivalence evaluations, over-the-counter (OTC) drug products that require approved applications as a condition of marketing, drug products with approval under Section 505 of the Act administered by the Division of Blood and Blood Products, Center for Biologics Evaluation and Research, and products that have been discontinued from marketing or that have had their approvals withdrawn for other than safety or efficacy reasons. This publication also includes indices of prescription and OTC drug products by trade or established name and by applicant name (holder of the approved application). The latter list includes applicants' names as abbreviated in this publication. In addition, a list of uniform terms is provided. An Addendum contains drug patent and exclusivity information for the Prescription and OTC Drug Product Lists, and for the Drug Products with Approval under Section 505 of the Act Administered by the Division of Blood and Blood Products List.

Prior to the 6th Edition, the publication had excluded OTC drug products and drug products with approval under Section 505 of the Act administered by the Division of Blood and Blood Products, because the main purpose of the publication was to provide information to states regarding FDA's recommendation as to which generic prescription drug products were acceptable candidates for drug product selection. The 1984 Amendments require the Agency to publish an up-to-date list of all marketed drug products, OTC as well as prescription, that have been approved for safety and efficacy and for which new drug applications are required. There are some drugs for which there are both approved and unapproved OTC drug products in the marketplace. This situation occurs as a result of the Agency's current OTC compliance policy which allows the marketing of various unapproved OTC drug products pending the effective date of the applicable final OTC monograph. The products included in the OTC Drug Product List are limited to those for which approved applications are currently required as a condition of marketing.

As a general rule, distributors of the products on the List are not identified when the distributor is not the same as the applicant holder. Because distributors are not required to notify FDA when they shift their sources of supply from one approved manufacturer to another, it is not possible to maintain complete information linking the product approval with the distributor or repackager handling the products.

1.2 Therapeutic Equivalence-Related Terms

Pharmaceutical Equivalents. Drug products are considered pharmaceutical equivalents if they contain the same active ingredient(s) and are identical in strength or concentration, dosage form, and route of administration (e.g., chlordiazepoxide hydrochloride, 5mg oral capsules). Pharmaceutically equivalent drug products are formulated to contain the same amount of active ingredient in the same dosage form and to meet the same or compendial or other applicable standards (i.e., strength, quality, purity, and identity), but they may differ in characteristics such as shape, scoring configuration, packaging, excipients (including colors, flavors, preservatives), expiration time, and, within certain limits, labeling.

Pharmaceutical Alternatives. Drug products are considered pharmaceutical alternatives if they contain the same therapeutic moiety, but are different salts, esters, or complexes of that moiety or are different dosage forms or strengths (e.g., tetracycline hydrochloride, 250mg capsules vs. tetracycline phosphate complex, 250mg capsules; quinidine sulfate, 200mg tablets vs. quinidine sulfate, 200mg capsules). Different dosage forms and strengths within a product line by a single manufacturer are thus pharmaceutical alternatives, as are extended-release products when compared with immediate- or standard-release formulations of the same active ingredient.

Therapeutic Equivalents. Drug products considered to be therapeutic equivalents are pharmaceutical equivalents that can be expected to have the same clinical effect when administered to patients under the conditions specified in the labeling. *The concept of therapeutic equivalence, as used to develop the List, applies only to products containing the same active ingredients and does not encompass a comparison of different therapeutic agents used for the same condition (e.g., propoxyphene hydrochloride vs. pentazocine hydrochloride for the treatment of pain).*

FDA classifies as therapeutically equivalent those products that meet the following general criteria: (1) they are approved as safe and effective, or approved under Section 505(j) of the Act; (2) they are pharmaceutical equivalents in that they (a) contain identical amounts of the same active drug ingredient in the same dosage form, and (b) meet compendial or other applicable standards of strength, quality, purity, and identity; (3) they are bioequivalent in that (a) they do not present a known or potential bioequivalence problem, and they meet an acceptable *in vitro* standard, or (b) if they do present such a known or potential problem, they are shown to meet an appropriate bioequivalence standard demonstrating comparable rate and extent of absorption; (4) they are adequately labeled; and (5) they are manufactured in compliance with Current Good Manufacturing Practice regulations.

FDA considers drug products to be therapeutically equivalent if they meet the criteria outlined above, even though they may differ in certain other characteristics such as shape, scoring configuration, packaging, excipients (including colors, flavors, preservatives), expiration time and minor aspects of labeling (e.g., the presence of specific pharmacokinetic information). When such differences are important in the care of a particular

FDA data supplied by DrugPatentWatch.com

patient, it may be appropriate for the prescribing physician to require that a particular brand be dispensed as a medical necessity. With this limitation, however, FDA believes that products classified as therapeutically equivalent can be substituted with the full expectation that the substituted product will produce the same clinical effect as the prescribed product.

Bioavailability. This term describes the rate and extent to which the active drug ingredient or therapeutic ingredient is absorbed from a drug product and becomes available at the site of drug action.

Bioequivalent Drug Products. This term describes pharmaceutically equivalent products that display comparable bioavailability when studied under similar experimental conditions. Section 505 (j)(7)(B) of the Act describes conditions under which a test and reference (listed) drug must be considered bioequivalent:

> the rate and extent of absorption of the test drug do not show a significant difference from the rate and extent of absorption of the reference drug when administered at the same molar dose of the therapeutic ingredient under similar experimental conditions in either a single dose or multiple doses; or
>
> the extent of absorption of the test drug does not show a significant difference from the extent of absorption of the reference drug when administered at the same molar dose of the therapeutic ingredient under similar experimental conditions in either a single dose or multiple doses and the difference from the reference drug in the rate of absorption of the drug is intentional, is reflected in its proposed labeling, is not essential to the attainment of effective body drug concentrations on chronic use, and is considered medically insignificant for the drug. Where these above methods are not applicable (e.g., for topically applied products intended for local rather than systemic effect), other *in vivo* tests of bioequivalence may be appropriate.

Bioequivalence may sometimes be demonstrated using an *in vitro* bioequivalence standard, especially when such an *in vitro* test has been correlated with human *in vivo* bioavailability data.

1.3 General Policies and Legal Status

The List contains public information and advice. It does not mandate the drug products which may be purchased, prescribed, dispensed, or substituted for one another nor, does it conversely, mandate the products that should be avoided. FDA takes no official position on drug product selection as administered by the states. The practice of pharmacy and medicine is a state responsibility. Therapeutic equivalence evaluations are a scientific judgment based upon evidence, while generic substitution may involve social and economic policy, administered by the states, intended to reduce the cost of drugs to consumers. To the extent that the List identifies drug products approved for marketing under Section 505 or 507 of the Act, it merely sets forth information that the Agency is required to publish and that the public is entitled to under the Freedom of Information Act. Exclusion of a drug product from the List does not necessarily mean that the drug product is either in violation of Section 505 or 507 of the Act, or that such a product is not safe or effective, or that such a product is not therapeutically equivalent to other drug products. Rather, the exclusion is based on the fact that FDA has not evaluated the safety, effectiveness, and quality of the drug product. To the extent that the List sets forth FDA's evaluations of the therapeutic equivalence of drug products that have been approved, it contains FDA's advice to the public and to the states regarding an important public health matter. These evaluations do not constitute determinations that any product is in violation of the Act or that any product is preferable to any other.

1.4 Practitioner's Responsibilities

Professional care and judgment should be exercised in using the List. Evaluations of therapeutic equivalence for prescription drugs are based on scientific and medical evaluations by FDA. Products evaluated as therapeutically equivalent can be expected, in the judgment of the FDA, to have equivalent clinical effect and no difference in their potential for adverse effects when used under the conditions of their labeling. However, these products may differ in other characteristics such as shape, scoring configuration, packaging, excipients (including colors, flavors, preservatives), expiration time, and, in some instances, labeling. If products with such differences are substituted for each other, there is a potential for patient confusion due to differences in color or shape of tablets, inability to provide a given dose using a partial tablet if the proper scoring configuration is not available, or less patient acceptance of certain products because of flavor. There may also be better stability of one product over another under adverse conditions of storage, allergic reactions in rare cases due to a coloring or a preservative ingredient, as well as differences in cost to the patient.

FDA evaluation of therapeutic equivalence in no way relieves practitioners of their professional responsibilities in prescribing and dispensing such products with due care and with appropriate information to individual patients. In those circumstances where the characteristics of a specific product, other than its active ingredient, are important in the therapy of a particular patient, the physician's specification of that product is appropriate. Pharmacists

FDA data supplied by DrugPatentWatch.com

must also be familiar with the expiration dates and labeling directions for storage of the different products, particularly for reconstituted products, to assure that patients are properly advised when one product is substituted for another.

Multisource and single-source drug products. FDA has evaluated for therapeutic equivalence only multisource prescription drug products, which in virtually all instances means those pharmaceutical equivalents available from more than one manufacturer. For such products, a therapeutic equivalence code is included and, in addition, product information is highlighted in bold face and underlined. Those products with approved applications that are single-source (i.e., there is only one approved product available for that active ingredient and dosage form) are also included on the List, but no therapeutic equivalence code is included with such products. The details of these codes and the policies underlying them are discussed in Section 1.5, *Therapeutic Equivalence Evaluations Codes.*

Products on the List are identified by the names of the holders of approved applications (applicants) who may not necessarily be the manufacturer of the product. The applicant may have had its product manufactured by a contract manufacturer and may simply be distributing the product for which it has obtained approval. In most instances, however, the manufacturer of the product is also the applicant. The name of the manufacturer is permitted by regulation to appear on the label, even when the manufacturer is not the marketer.

Although the products on the List are identified by the names of the applicants, circumstances, such as changing corporate ownership, have sometimes made identification of the applicant difficult. The Agency believes, based on continuing document review and communication with firms, that the applicant designations on the List, in most cases, are correct.

In order to relate firm name information on a product label to that on the List, the following should be noted: the applicant's name always appears on the List. This applies whether the applicant (firm name on the Form FDA 356h in the application) is the marketer (firm name in largest letters on the label) or not. However, the applicant's name may not always appear on the label of the product.

If the applicant is the marketer, its name appears on the List and on the label; if the applicant is not the marketer, and the Agency is aware of a corporate relationship (e.g., parent and subsidiary) between the applicant and the marketer, the name of the applicant appears on the List and both firm names may appear on the label. Firms with known corporate relationships are displayed in Appendix B. If there is no known corporate relationship between the applicant and the marketer, the applicant's name appears on the List; however, unless the applicant is the manufacturer, the applicant's name may not appear on the label. In this case, the practitioner, from labeling alone, will not be able to relate the marketed product to an applicant cited in the List, and hence to a specific approved drug product. In such cases, other references should be used to assure that the product in question is the subject of an approved application. Even if FDA were to attempt to expand the List to link distributors or repackagers with applicants, FDA would not have ready access to the necessary information. This is because there is no requirement that distributors or repackagers notify FDA when they change product sources (manufacturers).

In order to relate trade name information on a product label to that on the List, the following should be noted: if the applicant is the marketer, its name appears on the List and on the label; if the Agency is aware of a corporate relationship between the applicant and the marketer, the trade name (proprietary name) of the drug product (established drug name if no trade name exists) appears on the List. If there is no known corporate relationship between the applicant and the marketer, the established drug name appears on the List.

Every product on the List is subject at all times to regulatory action. From time to time, approved products may be found in violation of one or more provisions of the Act. In such circumstances, the Agency will commence appropriate enforcement action to correct the violation, if necessary, by removing the product from the market by voluntary recall, seizure, or other enforcement actions. Such regulatory actions are, however, independent of the inclusion of a product on the List. The main criterion for inclusion of a product is that it has an approved application that has not been withdrawn for safety or efficacy reasons. FDA believes that retention of a violative product on the List will not have any significant adverse health consequences, because other legal mechanisms are available to the Agency to prevent the product's actual marketing. FDA may, however, change a product's therapeutic equivalence rating if the circumstances giving rise to the violation change the Agency's assessment of whether a product meets the criteria for therapeutic equivalence.

1.5 Therapeutic Equivalence Evaluations Codes

The two-letter coding system for therapeutic equivalence evaluations is constructed to allow users to determine quickly whether the Agency has evaluated a particular approved product as therapeutically equivalent to other pharmaceutically equivalent products (first letter) and to provide additional information on the basis of FDA's evaluations (second letter).

The two basic categories into which multisource drugs have been placed are indicated by the first letter as follows:

A— Drug products that FDA considers to be therapeutically equivalent to other pharmaceutically equivalent products, i.e., drug products for which:

FDA data supplied by DrugPatentWatch.com

(1) there are no known or suspected bioequivalence problems. These are designated **AA, AN, AO, AP, or AT,** depending on the dosage form; or

(2) actual or potential bioequivalence problems have been resolved with adequate *in vivo* and/or *in vitro* evidence supporting bioequivalence. These are designated **AB.**

B— Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products, i.e.,

drug products for which actual or potential bioequivalence problems have not been resolved by adequate evidence of bioequivalence. Often the problem is with specific dosage forms rather than with the active ingredients. These are designated **BC, BD, BE, BN, BP, BR, BS, BT, or BX.**

Individual drug products have been evaluated as therapeutically equivalent to the reference product in accordance with the definitions and policies outlined below:

"A" CODES

Drug products that are considered to be therapeutically equivalent to other pharmaceutically equivalent products.

Drug products designated with an "**A**" code fall under one of two main policies:

(1) for those active ingredients for which no bioequivalence issue is known or suspected, the information necessary to show bioequivalence between pharmaceutically equivalent products is presumed for some dosage forms (e.g., solutions) or satisfied for solid oral dosage forms by a showing that an acceptable *in vitro* standard is met. A therapeutically equivalent rating is assigned such products so long as they are manufactured in accordance with Current Good Manufacturing Practice regulations and meet the other requirements of their approved applications (these are designated **AA, AN, AO, AP,** or **AT,** depending on the dosage form, as described below); and

(2) for those DESI drug products containing active ingredients that have been identified by FDA as having actual or potential bioequivalence problems [21 CFR 320.22, or January 7, 1977 (42 FR 1648), revised July 14, 1981], and for post-1962 drug products, an evaluation of therapeutic equivalence is assigned to pharmaceutical equivalents only if the approved application contains adequate scientific evidence establishing through *in vivo* studies the bioequivalence of the product to a selected standard product.

There are some general principles that may affect the substitution of pharmaceutically equivalent products in specific cases. Prescribers and dispensers of drugs should be alert to these principles so as to deal appropriately with situations that require professional judgment and discretion.

There may be labeling differences among pharmaceutically equivalent products that require attention on the part of the health professional. For example, pharmaceutically equivalent powders to be reconstituted for administration as oral or injectable liquids may vary with respect to their expiration time or storage conditions after reconstitution. An FDA evaluation that such products are therapeutically equivalent is applicable only when each product is reconstituted, stored, and used under the conditions specified in the labeling of that product.

The Agency will use notes in this publication to point out special situations where potential differences between two drug products that have been evaluated as bioequivalent and otherwise therapeutically equivalent should be brought to the attention of health professionals. These notes are contained in Section 1.6, *Description of Special Situations.*

For example, rarely there may be variations among therapeutically equivalent products in their use or in conditions of administration. Such differences may be due to patent or exclusivity rights associated with such use. When such variations may, in the Agency's opinion, affect prescribing or substitution decisions by health professionals, a note will be added to Section 1.6.

Also, there may occasionally arise a situation in which changes in a listed drug product after its approval (for example, a change in dosing interval) may have an impact on the substitutability of already approved generic versions of that product that were rated by the Agency as therapeutically equivalent to the listed product. When such changes in the listed drug product are thought by the Agency to have a significant impact on therapeutic equivalence, the Agency will change the therapeutic equivalence ratings for other versions of the drug product unless the manufacturers of those other versions of the product provide additional information to assure equivalence under the changed conditions. Pending receipt of the additional data, the Agency may add a note to Section 1.6, or, in rare cases, may even change the therapeutic equivalence rating.

In some cases (e.g., Isolyte S w/ Dextrose 5% in Plastic Container and Plasma-Lyte 148 and Dextrose 5% in Plastic Container), closely related products are listed as containing the same active ingredients, but in somewhat

FDA data supplied by DrugPatentWatch.com

different amounts. In determining which of these products are pharmaceutically equivalent, the Agency has considered products to be pharmaceutically equivalent with labeled strengths of an ingredient that do not vary by more than 1%.

Different salts and esters of the same therapeutic moiety are regarded as pharmaceutical alternatives. Such products are not considered to be therapeutically equivalent. There are no instances in this List where pharmaceutical alternatives are coded as therapeutically equivalent. Anhydrous and hydrated entities are not considered pharmaceutical equivalents unless they meet the same standards and, where necessary, as in the case of ampicillin/ampicillin trihydrate, their equivalence is supported by appropriate bioavailability/bioequivalence studies.

The codes in this book are not intended to preclude health care professionals from converting pharmaceutically different concentrations into pharmaceutical equivalents using accepted professional practice.

Where package size variations have therapeutic implications, products so packaged have not been considered pharmaceutically equivalent. For example, some oral contraceptives are supplied in 21-tablet and 28-tablet packets; the 28-tablet packets contain 7 placebo or iron tablets. These two packaging configurations are not regarded as pharmaceutically equivalent; thus, they are not designated as therapeutically equivalent.

Preservatives may differ among some therapeutically equivalent drug products. Differences in preservatives and other inactive ingredients do not affect FDA's evaluation of therapeutic equivalence except in cases where these components may influence bioequivalence.

The specific sub-codes for those drugs evaluated as therapeutically equivalent and the policies underlying these sub-codes follow:

AA

Products in conventional dosage forms not presenting bioequivalence problems

Products coded as **AA** contain active ingredients and dosage forms that are not regarded as presenting either actual or potential bioequivalence problems or drug quality or standards issues. However, all solid oral dosage forms must, nonetheless, meet an appropriate *in vitro* test for approval.

AB

Products meeting necessary bioequivalence requirements

Products generally will be coded **AB** if a study is submitted demonstrating bioequivalence, even if the study currently is not required for approval. This category also includes those few drugs for which there is more than one approved application but only one manufacturer. The only instance in which a multisource product will be rated **AB** on the basis of bioavailability rather than bioequivalence is where the innovator product is the only one listed under that drug ingredient heading. It does not signify that this product is therapeutically equivalent to the other drugs under the same heading. Thus, one product under a drug ingredient heading, coded **AB,** is not therapeutically equivalent to a drug product under the same heading that is coded **BD, BP,** or **BX.** Drugs coded **AB** under an ingredient heading are considered therapeutically equivalent only to other drugs coded **AB** under that heading.

AN

Solutions and powders for aerosolization

Uncertainty regarding the therapeutic equivalence of aerosolized products arises primarily because of differences in the drug delivery system. Solutions and powders intended for aerosolization that are marketed for use in any of several delivery systems are considered to be pharmaceutically and therapeutically equivalent and are coded **AN.** Those products that are compatible only with a specific delivery system or those products that are packaged in and with a specific delivery system are coded **BN,** because drug products in their respective delivery systems are not necessarily pharmaceutically equivalent to each other and, therefore, are not therapeutically equivalent.

AO

Injectable oil solutions

The absorption of drugs in injectable (parenteral) oil solutions may vary substantially with the type of oil employed as a vehicle and the concentration of the active ingredient. Injectable oil solutions are therefore considered to be pharmaceutically and therapeutically equivalent only when the active ingredient, its concentration, and the type of oil used as a vehicle are all identical.

AP

Injectable aqueous solutions

It should be noted that even though injectable (parenteral) products under a specific listing may be evaluated as therapeutically equivalent, there may be important differences among the products in the general category, *Injectable; Injection.* For example, some injectable products that are rated therapeutically equivalent are labeled for different routes of administration. In addition, some products evaluated as therapeutically equivalent may have different preservatives or no preservatives at all. Injectable

FDA data supplied by DrugPatentWatch.com

products available as dry powders for reconstitution, concentrated sterile solutions for dilution, or sterile solutions ready for injection are all considered to be pharmaceutically and therapeutically equivalent provided they are designed to produce the same concentration prior to injection and are similarly labeled. Consistent with accepted professional practice, it is the responsibility of the prescriber, dispenser, or individual administering the product to be familiar with a product's labeling to assure that it is given only by the route(s) of administration stated in the labeling.

Certain commonly used large volume intravenous products in glass containers are not included on the List (e.g., dextrose injection 5%, dextrose injection 10%, sodium chloride injection 0.9%). Virtually all of these products first came on the market before 1938 and have not been required to have an approved NDA as a condition of marketing. When packaged in plastic containers, however, these same products are considered to be new drugs requiring approved applications for marketing. Approval then depends on, among other things, the extent of the available safety data involving the specific plastic component of the product. All large volume parenteral products are manufactured under similar standards, regardless of whether they are packaged in glass or plastic. Thus, FDA has no reason to believe that the packaging container of large volume parenteral drug products that are pharmaceutically equivalent would have any effect on their therapeutic equivalence.

AT

Topical products

There are a variety of topical dosage forms available for dermatologic, ophthalmic, otic, rectal, and vaginal administration, including solutions, creams, ointments, gels, lotions, pastes, sprays, and suppositories. Even though different topical dosage forms may contain the same active ingredient and potency, these dosage forms are not considered pharmaceutically equivalent. Therefore, they are not considered therapeutically equivalent. All solutions and DESI drug products containing the same active ingredient in the same topical dosage form for which a waiver of *in vivo* bioequivalence has been granted and for which chemistry and manufacturing processes are adequate, are considered therapeutically equivalent and coded **AT**. Pharmaceutically equivalent topical products that raise questions of bioequivalence including all post-1962 topical drug products are coded **AB** when supported by adequate bioequivalence data, and **BT** in the absence of such data.

"B" CODES

Drug products that FDA does not at this time consider to be therapeutically equivalent to other pharmaceutically equivalent products.

Drug products designated with a **"B"** code fall under one of two main policies:

(1) the drug products contain active ingredients or are manufactured in dosage forms that have been identified by the Agency as having documented bioequivalence problems or a significant potential for such problems and for which no adequate studies demonstrating bioequivalence have been submitted to FDA; and

(2) the quality standards are inadequate or FDA has an insufficient basis to determine therapeutic equivalence.

The specific coding definitions and policies for the **"B"** sub-codes are as follows:

BC

Extended-release tablets, extended-release capsules, and extended-release injectables

An extended-release dosage form is defined by the official compendia as one that allows at least a twofold reduction in dosing frequency as compared to that drug presented as a conventional dosage form (e.g., as a solution or a prompt drug-releasing, conventional solid dosage form).

Although bioavailability studies have been conducted on these dosage forms, they are subject to bioavailability differences, primarily because firms developing extended-release products for the same active ingredient rarely employ the same formulation approach. FDA, therefore, does not consider different extended-release dosage forms containing the same active ingredient in equal strength to be therapeutically equivalent unless equivalence between individual products in both rate and extent has been specifically demonstrated through appropriate bioequivalence studies. Extended-release products for which such bioequivalence data have not been submitted are coded **BC**, while those for which such data are available have been coded **AB**.

FDA data supplied by DrugPatentWatch.com

BD

Active ingredients and dosage forms with documented bioequivalence problems

The **BD** code denotes products containing active ingredients with known bioequivalence problems and for which adequate studies have not been submitted to FDA demonstrating bioequivalence. Where such studies have been submitted, the product has been coded **AB.**

BE

Delayed-release oral dosage forms

A delayed-release dosage form is defined by the official compendia as one that releases a drug (or drugs) at a time other than promptly after administration. Enteric-coated articles are delayed-release dosage forms.

Drug products in delayed-release dosage forms containing the same active ingredients are subject to significant differences in absorption. Unless otherwise specifically noted, the Agency considers different delayed-release products containing the same active ingredients as presenting a potential bioequivalence problem and codes these products **BE** in the absence of *in vivo* studies showing bioequivalence. If adequate *in vivo* studies have demonstrated the bioequivalence of specific delayed-release products, such products are coded **AB.**

BN

Products in aerosol-nebulizer drug delivery systems

This code applies to drug solutions or powders that are marketed only as a component of, or as compatible with, a specific drug delivery system. There may, for example, be significant differences in the dose of drug and particle size delivered by different products of this type. Therefore, such products are not regarded as pharmaceutically equivalent.

BP

Active ingredients and dosage forms with potential bioequivalence problems

FDA's bioequivalence regulations (21 CFR 320.52) contain criteria and procedures for determining whether a specific active ingredient in a specific dosage form has a potential for causing a bioequivalence problem. It is FDA's policy to consider an ingredient meeting these criteria as having a potential bioequivalence problem even in the absence of positive data demonstrating inequivalence. Pharmaceutically equivalent products containing these ingredients in oral dosage forms are coded **BP** until adequate *in vivo* bioequivalence data are submitted.

Injectable suspensions containing an active ingredient suspended in an aqueous or oleaginous vehicle have also been coded **BP.** Injectable suspensions are subject to bioequivalence problems because differences in particle size, polymorphic structure of the suspended active ingredient, or the suspension formulation can significantly affect the rate of release and absorption. FDA does not consider pharmaceutical equivalents of these products bioequivalent without adequate evidence of bioequivalence.

BR

Suppositories or enemas that deliver drugs for systemic absorption

The absorption of active ingredients from suppositories or enemas that are intended to have a systemic effect (as distinct from suppositories administered for local effect) can vary significantly from product to product. Therefore, FDA considers pharmaceutically equivalent systemic suppositories or enemas bioequivalent only if *in vivo* evidence of bioequivalence is available. In those cases where *in vivo* evidence is available, the product is coded **AB.** If such evidence is not available, the products are coded **BR.**

BS

Products having drug standard deficiencies

If the drug standards for an active ingredient in a particular dosage form are found by FDA to be deficient so as to prevent an FDA evaluation of either pharmaceutical or therapeutic equivalence, all drug products containing that active ingredient in that dosage form are coded **BS.** For example, if the standards permit a wide variation in pharmacologically active components of the active ingredient such that pharmaceutical equivalence is in question, all products containing that active ingredient in that dosage form are coded **BS.**

BT

Topical products with bioequivalence issues

This code applies mainly to post-1962 dermatologic, ophthalmic, otic, rectal, and vaginal products for topical administration, including creams, ointments, gels, lotions, pastes, and sprays, as well as suppositories not intended for systemic drug absorption. Topical products evaluated as having acceptable performance, but that are not bioequivalent to other pharmaceutically equivalent products or that lack sufficient evidence of bioequivalence will be coded **BT.**

FDA data supplied by DrugPatentWatch.com

BX

Insufficient data

The code **BX** is assigned to specific drug products for which the data that has been reviewed by the Agency are insufficient to determine therapeutic equivalence under the policies stated in this document. In these situations, the drug products are presumed to be therapeutically inequivalent until the Agency has determined that there is adequate information to make a full evaluation of therapeutic equivalence.

1.6 Description of Special Situations

Certain drugs present special situations that deserve a more complete explanation than can be provided by the two-letter codes used in the List. These drugs have particular problems with standards of identity, analytical methodology, or bioequivalence that are in the process of resolution. The following drugs are in this category:

Amino Acid and Protein Hydrolysate Injections. These products differ in the amount and kinds of amino acids they contain and, therefore, are not considered pharmaceutical equivalents. For this reason, these products are not considered therapeutically equivalent. At the same time, the Agency believes that it is appropriate to point out that where nitrogen balance is the sole therapeutic objective and individual amino acid content is not a consideration, pharmaceutical alternatives with the same total amount of nitrogen content may be considered therapeutically equivalent.

Erythromycin Stearate Tablets. All manufacturers of erythromycin stearate tablet products demonstrated product bioequivalency as a condition of application approval. These bioequivalence studies were performed under fasting conditions and, as a result, all firms were required to label their products to be taken on an empty stomach. Since that time, some firms have demonstrated that their products may be taken immediately before meals, but not with meals, and still achieve acceptable blood levels. On the basis of such studies, FDA has approved those products to be labeled accordingly. At the same time, the Agency stresses that optimal absorption for any erythromycin stearate tablet is achieved when the drug is administered under fasting conditions and recommends that prescriptions include instructions regarding administration in relation to meals. When erythromycin stearate tablets are to be administered under fasting conditions, the Agency believes that any listed product coded **AB** may be considered therapeutically equivalent. If erythromycin stearate is to be taken immediately before meals, only those products with labeling that provides for such administration should be dispensed. Erythromycin stearate tablet products have been designated therapeutically equivalent **(AB)** in the List, because all of the products produce equivalent blood levels provided the drug is prescribed and administered in accordance with the conditions of use in the labeling. This matter is being reviewed by the Agency. Prescribers and dispensers are advised to be familiar with the labeling of these products.

Gaviscon. Gaviscon is an OTC product which has been marketed since September 1970. The active ingredients in this product, aluminum hydroxide and magnesium trisilicate, were reviewed by the Agency's OTC Antacid Panel and were considered to be safe and effective ingredients (Category I) by that Panel. However, the tablet failed to pass the antacid test which is required of all antacid products. The Agency, therefore, placed the tablet in Category III for lack of effectiveness. A full NDA with clinical studies was submitted by Marion Laboratories, Inc., and approved by FDA on December 9, 1983. Gaviscon's activity in treating reflux acidity is made possible by the physical-chemical properties of the inactive ingredients, sodium bicarbonate and alginic acid. Therefore, *all ANDAs which cite Gaviscon tablets as the listed drug must contain the inactive ingredients, sodium bicarbonate and alginic acid.* A full NDA will be required to support the effectiveness of the drug product if different inactive ingredients are to be substituted for sodium bicarbonate or alginic acid or if different proportions of these ingredients are to be used.

Theophylline. Recent studies suggest that food may significantly alter the absorption of theophylline from some extended-release theophylline drug products. Current research is defining more precisely the relationship between the timing of meals (including type and amount of food) and the rate and extent of absorption of theophylline from the extended-release dosage form. See Section 1.5, *Therapeutic Equivalence Evaluations Codes,* page 1-4. Specific product labeling should be consulted to determine the information available on this subject.

Trazodone Hydrochloride. Generic Trazodone HCl 150mg tablet entries, marked with a (†), are rated as therapeutically equivalent **(AB)** to Mead Johnson's Desyrel® (Trazodone HCl) Dividose 150mg tablets. The therapeutic equivalence determination was made on the basis, among other things, of an acceptable bioequivalence study and acceptable *in vitro* dissolution testing. A patent that exists on the Desyrel® 150mg tablet scoring design, which enables the patient to break Desyrel® into three 50mg segments, currently prevents a generic firm from copying this feature. Therefore, a patient will not be able to obtain three 50mg segments from the generic tablet. Prescribers and dispensers should be aware of this difference and take it into account when writing a prescription or practicing drug product selection.

1.7 Therapeutic Equivalence Code Change for a Drug Entity

The Agency will use these procedures when, in response to a petition or on its own initiative, it is considering a change in the therapeutic equivalence code for approved

FDA data supplied by DrugPatentWatch.com

multisource drug products. Such changes will generally occur when the Agency becomes aware of new scientific information affecting the therapeutic equivalence of an entire category of drugs in the List (e.g., information concerning the active ingredient or the dosage form), rather than information concerning a single drug product within the category. These procedures will be used when a change in therapeutic equivalence code is under consideration for all drug products found in the Prescription Drug Product List under a specific drug entity and dosage form. The change may be from the code signifying that the drug does not present a bioequivalence problem (e.g., **AA**) to a code signifying a bioequivalence problem (e.g., **BP**), or vice versa. This procedure does not apply to a change of a single product code (e.g., a change from **BP** to **AB** or from **AB** to **BX**).

Before making a change in a code for an entire category of drugs, the Agency will announce in the *Introduction* to the Cumulative Supplement that it is considering the change, and will invite comment. Comments, along with scientific data, may be sent to the Director, Division of Bioequivalence, Center for Drug Evaluation and Research, HFD-650, Room 17B06, 5600 Fishers Lane, Rockville, MD 20857. The comment period will generally be 60 days in length, and the closing date for comments will be listed in the description of the proposed change for each drug entity.

The most useful type of scientific data submission is an *in vivo* bioavailability/bioequivalence study conducted on batches of the subject drug. These submissions should present a full description of the analytical procedures and equipment used, a validation of the analytical methodology, including the standard curve, a description of the method of calculating results, and a description of the pharmacokinetic and statistical models used in analyzing the data. Anecdotal or testimonial information is the least useful to the Agency, and such submissions are discouraged. Copies of supporting reports published in the scientific literature or unpublished material, however, are welcome.

1.8 Downgrading of the Therapeutic Equivalence Evaluation

The aforementioned procedure does not apply to a change in a single product code. For example, a change in a product's code from **BP** to **AB** as a result of the submission of a bioequivalence study will not ordinarily be the subject of notice and comment. Likewise, a change in a product's code from **AB** to **BX** (e.g., as a result of new information raising a significant question as to bioequivalence) does not require notice and comment. The Agency's responsibility to provide the public with the Agency's most current information related to therapeutic equivalence may require a change in a product's code prior to any formal notice and opportunity for the applicant to be heard. The publication in the *Federal Register* of a Proposal to withdraw approval of a generic drug will result in a change in a product's code from **AB** to **BX** if this action has not already been taken.

1.9 Availability of Internal Policy and Procedure Guides

The Division of Generic Drugs maintains internal policy and procedure guides. Although these guides are designed for division personnel and are subjuct to change without public notice, they are available to members of the public who may wish to know more about the division's policies and procedures. Copies of these guides may be obtained from the Division Director, HFD-600, Room 17B45, 5600 Fishers Lane, Rockville, MD, 20857. The agency welcomes public comment on the policies, procedures, and practices employed in the approval of generic drugs. Such comments may be sent to the above address.

1.10 Availability of the Publication and Updating Procedures

FDA provides monthly Cumulative Supplements to each annual edition, furnishing, among other things, new drug approval information and, if necessary, revised therapeutic equivalence evaluations and updated patent and exclusivity data. Since all parts of this publication are subject to changes, additions, or deletions, the List must be used in conjunction with the most current Cumulative Supplement.

An updated magnetic tape containing only the Prescription Drug Product List is available quarterly by subscription from the U.S. Department of Commerce, National Technical Information Service, Springfield, VA 22161.

FDA data supplied by DrugPatentWatch.com

FDA data supplied by DrugPatentWatch.com

2. HOW TO USE THE DRUG PRODUCT LISTS

2.1 Key Sections for Using the Drug Product Lists

This publication contains the Drug Product Lists, along with illustrations, indices, and lists of abbreviations and terms which facilitate their use.

Drug Product Lists. The Drug Product Lists, arranged alphabetically by active ingredient, contain product identification information (active ingredients, dosage forms, routes of administration, product names, applicants, strengths) for single and multiple ingredient drug products. Also shown is the application number and product number (FDA's file numbers) and approval dates for those products approved on or after January 1, 1982. The effective date for the approved drug product (the earliest date the product may be marketed) appears, when appropriate, to the left of the approval date.

If a prescription product is available from more than one source (multisource), a therapeutic equivalence code will appear in front of the applicant's name. If a product is therapeutically equivalent to one or more products or to an appropriate reference, it will be designated with a code beginning with "**A**" and the entry will be underlined and printed in bold font for emphasis.

Active ingredients in multiple ingredient (combination) products are arranged alphabetically. For example, product information for the product labeled methyldopa and chlorothiazide appears listed under *Chlorothiazide; Methyldopa.* A cross-reference to the product information (for prescription and OTC products) appears for each additional active ingredient in the product. For combination products, the ingredient strengths are separated by semicolons and appear in the same relative sequence as the ingredients in the heading. Available strengths of the dosage form from an applicant appear on separate lines.

To use the Drug Product Lists, determine by alphabetical order the ingredient under which the product information is listed, using the Product Name Index, if appropriate. Then, find the ingredient in the applicable Drug Product List. Proceed to the dosage form and route of administration and compare products within that ingredient heading only. Therapeutic equivalence or inequivalence for prescription products is determined on the basis of the therapeutic equivalence codes provided within that specific dosage form heading. The OTC Drug Product List, Discontinued Drug Product List and Drug Products with Approval under Section 505 of the Act Administered by the Division of Blood and Blood Products List have their data arranged similarly. The Discontinued Drug Product List contains products discontinued from marketing or products that have had their approval withdrawn for other than safety or effectiveness reasons. All products having a " ∂ " in the 12th Cumulative Supplement of the 10th Edition List will then be added to the Discontinued Drug Product List appearing in the 11th Edition.

Illustrations. The annotated Drug Product Illustration and Therapeutic Equivalence Evaluations Illustration are offered to provide further clarification. These depict the format found in the Prescription Drug Product List (the only List in which therapeutic equivalence evaluation codes are found).

Product Name Index (Prescription and OTC Drug Product Lists). This is an index of products by established or trade name. The second term of each entry indicates the ingredient under which product information can be found in the appropriate Drug Product List. OTC products are so designated.

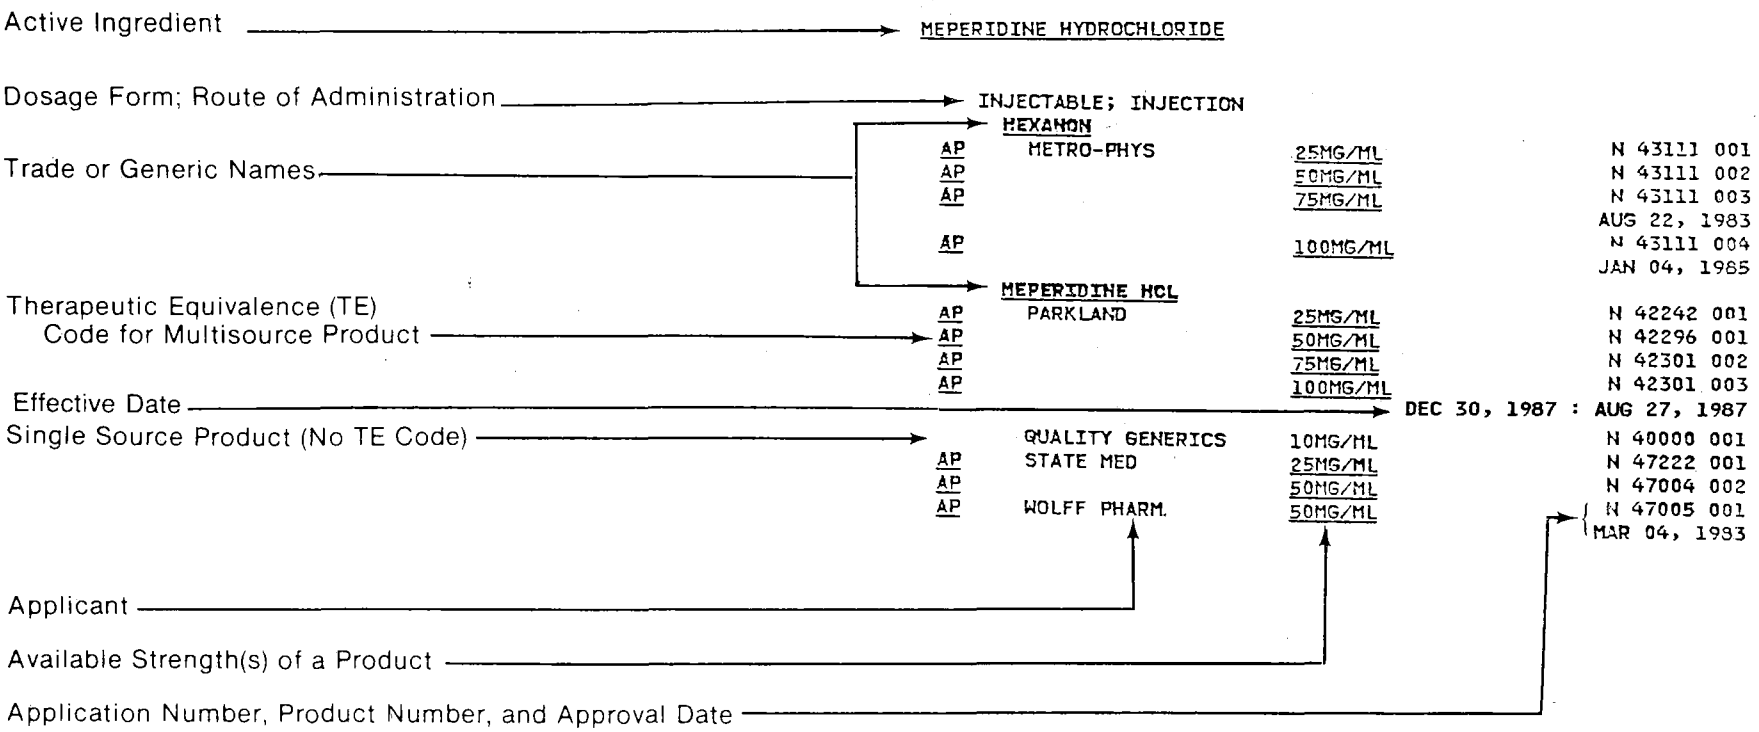

Product Name Index Listed by Applicant (Prescription and OTC Drug Product Lists). This is an index that cross-references applicants to products. The bolded and underlined entry represents the applicant name abbreviation used in this publication. Each complete applicant name that is represented by the abbreviated name is marked with an asterisk (*). Listed under each complete applicant name is the first alphabetically arranged ingredient under which product information can be found in the appropriate Drug Product List. OTC products are so designated.

Uniform Terms. In order to improve readability, uniform terms are used to designate dosage forms, routes of administration, and abbreviations used to express strengths. These terms are listed in Appendix C. In some cases, the terms used may differ from those used in product labels and other labeling.

2.2 DRUG PRODUCT ILLUSTRATION

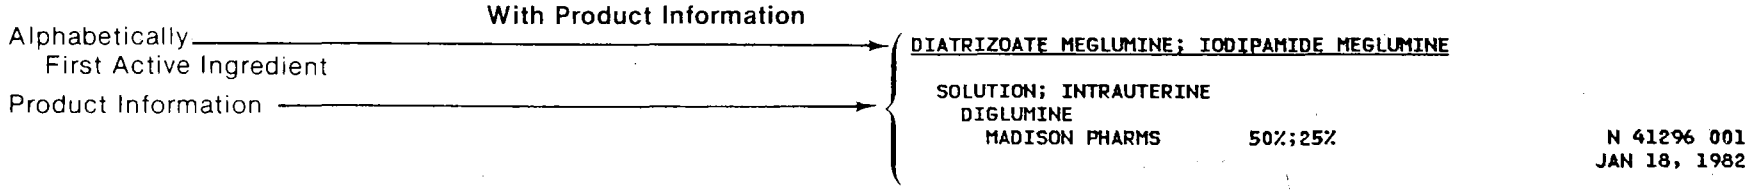

FDA data supplied by DrugPatentWatch.com

Single Ingredient

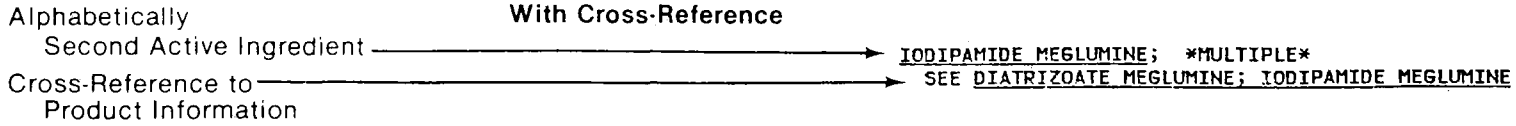

Multiple Ingredients

With Product Information

With Cross-Reference

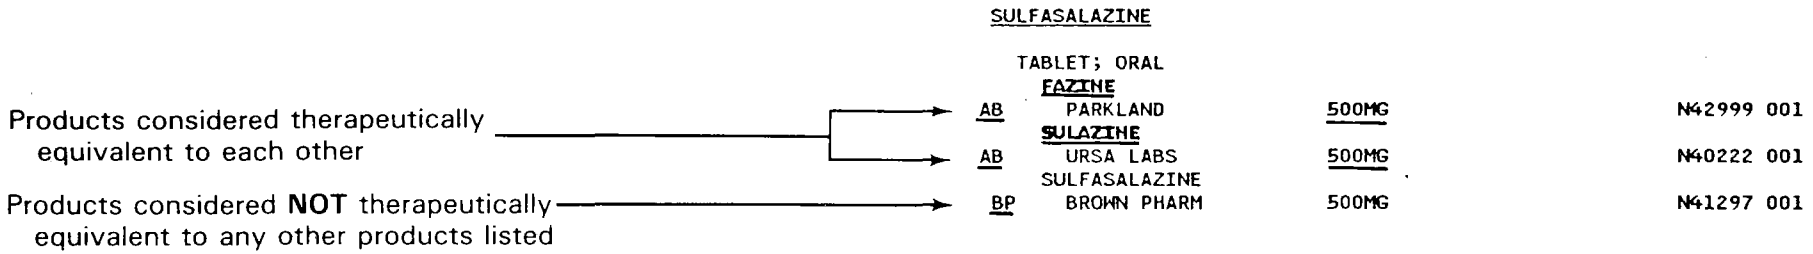

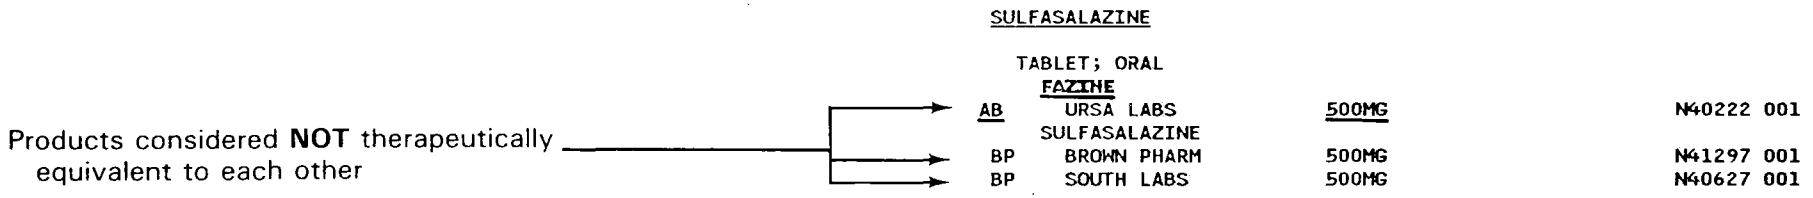

This example is for purposes of illustration only. It does not represent actual products from the Prescription Drug Product list.

FDA data supplied by DrugPatentWatch.com

2.3 THERAPEUTIC EQUIVALENCE EVALUATIONS ILLUSTRATION

Drug products coded **AB** (or any code beginning with an "**A**") under an ingredient and dosage form heading are considered therapeutically equivalent only to other products coded **AB** (or any code beginning with an "**A**") and **NOT** to those coded **BP** (or any code beginning with a "**B**") and any products not listed. Drug products coded **BP** (or any code beginning with a "**B**") are **NOT** considered therapeutically equivalent to any other product. For a complete explanation of the TE codes refer to Section 1.5 of the *Introduction.*

NOTE: Bold font and underlining denotes multisource products which are considered therapeutically equivalent.

This example is for purposes of illustration only. It does not represent actual products from the Prescription Drug Product list.

PRESCRIPTION DRUG PRODUCT LIST

AMOXICILLIN; CLAVULANATE POTASSIUM

POWDER FOR RECONSTITUTION; ORAL
- AUGMENTIN '125'
  - BEECHAM LABS — 125MG/5ML; EQ 31.25MG ACID/5ML — N50575 001 — AUG 06, 1984
- AUGMENTIN '250'
  - BEECHAM LABS — 250MG/5ML; EQ 62.5MG ACID/5ML — N50575 002 — AUG 06, 1984

TABLET; ORAL
- AUGMENTIN '250'
  - BEECHAM LABS — 250MG;EQ 125MG ACID — N50564 001 — AUG 06, 1984
- AUGMENTIN '500'
  - BEECHAM LABS — 500MG;EQ 125MG ACID — N50564 002 — AUG 06, 1984

TABLET, CHEWABLE; ORAL
- AUGMENTIN '125'
  - BEECHAM LABS — 125MG;EQ 31.25MG ACID — N50597 001 — JUL 22, 1985
- AUGMENTIN '250'
  - BEECHAM LABS — 250MG;EQ 62.5MG ACID — N50597 002 — JUL 22, 1985

AMPHETAMINE ADIPATE; AMPHETAMINE SULFATE; DEXTROAMPHETAMINE ADIPATE; DEXTROAMPHETAMINE SULFATE

CAPSULE; ORAL
- DELCOBESE
  - LEMMON — 1.25MG;1.25MG;1.25MG; 1.25MG — N83564 001
  - 2.5MG;2.5MG;2.5MG;2.5MG — N83564 002
  - 3.75MG;3.75MG;3.75MG; 3.75MG — N83564 003
  - 5MG;5MG;5MG;5MG — N83564 004

TABLET; ORAL
- DELCOBESE
  - LEMMON — 1.25MG;1.25MG;1.25MG; 1.25MG — N83563 004
  - 2.5MG;2.5MG;2.5MG;2.5MG — N83563 003
  - 3.75MG;3.75MG;3.75MG; 3.75MG — N83563 002
  - 5MG;5MG;5MG;5MG — N83563 001

AMPHETAMINE RESIN COMPLEX; DEXTROAMPHETAMINE RESIN COMPLEX

CAPSULE, EXTENDED RELEASE; ORAL
- BIPHETAMINE 12.5
  - PENNWALT — EQ 6.25MG BASE; EQ 6.25MG BASE — N10093 007
- BIPHETAMINE 20
  - PENNWALT — EQ 10MG BASE; EQ 10MG BASE — N10093 003
- BIPHETAMINE 7.5
  - PENNWALT — EQ 3.75MG BASE; EQ 3.75MG BASE — N10093 009

AMPHETAMINE SULFATE

TABLET; ORAL
- AMPHETAMINE SULFATE
  - LANNETT — 5MG — N83901 001 — AUG 31, 1984
  - 10MG — N83901 002 — AUG 31, 1984

AMPHETAMINE SULFATE; *MULTIPLE*

SEE AMPHETAMINE ADIPATE; AMPHETAMINE SULFATE; DEXTROAMPHETAMINE ADIPATE; DEXTROAMPHETAMINE SULFATE

AMPHOTERICIN B

CREAM; TOPICAL
- FUNGIZONE
  - SQUIBB — 3% — N50314 001

INJECTABLE; INJECTION
- AMPHOTERICIN B
  - AP LYPHOMED — 50MG/VIAL — N62728 001 — APR 13, 1987
- FUNGIZONE
  - AP SQUIBB — 50MG/VIAL — N60517 001

LOTION; TOPICAL
- FUNGIZONE
  - SQUIBB — 3% — N60570 001

OINTMENT; TOPICAL
- FUNGIZONE
  - SQUIBB — 3% — N50313 001

ORPHAN DRUG PRODUCT DESIGNATIONS

THE FOLLOWING DRUGS AND BIOLOGICALS HAVE BEEN GRANTED ORPHAN DRUG DESIGNATION PURSUANT TO SECTION 526 OF THE FOOD, DRUG, AND COSMETIC ACT AS AMENDED BY THE ORPHAN DRUG ACT [PUB. L. 97-414].

TWO PARAGRAPHS EXCERPTED FROM THE SUPPLEMENTARY INFORMATION SECTION OF THE CUMULATIVE LIST OF ORPHAN DRUG AND BIOLOGICAL DESIGNATIONS, PUBLISHED IN THE FEDERAL REGISTER OF FEBRUARY 16, 1989 [VOL. 54, NO. 31, P. 7100], STATE:

"THE ORPHAN-DRUG DESIGNATION OF A DRUG OR BIOLOGICAL PRODUCT APPLIES ONLY TO THE SPONSOR THAT REQUESTED THE DESIGNATION. EACH SPONSOR INTERESTED IN DEVELOPING AN ORPHAN DRUG OR ORPHAN BIOLOGICAL PRODUCT MUST APPLY FOR ORPHAN-DRUG DESIGNATION TO OBTAIN EXCLUSIVE MARKETING RIGHTS."

"THE NAMES USED IN THE LIST TO IDENTIFY DRUG AND BIOLOGICAL PRODUCTS THAT HAVE NOT BEEN APPROVED/LICENSED FOR MARKETING MAY NOT BE THE ESTABLISHED/PROPER NAMES APPROVED BY FDA FOR THESE PRODUCTS IF THEY ARE EVENTUALLY APPROVED-LICENSED FOR MARKETING. BECAUSE THESE PRODUCTS ARE INVESTIGATIONAL, SOME MAY NOT YET HAVE BEEN REVIEWED FOR PURPOSES OF ASSIGNING THE MOST APPROPRIATE ESTABLISHED/PROPER NAME."

BIOLOGICAL DESIGNATIONS
[Approved for Marketing*]
[Exclusive Approval**]

NAME OF BIOLOGICAL	DESIGNATED USE [EXCLUSIVITY EXPIRATION DATE]	SPONSOR NAME AND ADDRESS
GENERIC: AEROSOLIZED POOLED IMMUNE GLOBULIN TRADE: NOT ESTABLISHED	TREATMENT OF RESPIRATORY SYNCYTIAL VIRUS LOWER RESPIRATORY TRACT DISEASE.	PEDIATRIC PHARMACEUTICALS 379 THORNALL STREET EDISON, NJ 08837
GENERIC: ALPHA-1-ANTITRYPSIN (RECOMBINANT DNA ORIGIN) TRADE: NOT ESTABLISHED	SUPPLEMENTATION THERAPY FOR ALPHA-1 ANTITRYPSIN DEFICIENCY IN THE ZZ PHENOTYPE POPULATION.	COOPER LABS 3145 PORTER DR. PALO ALTO, CA 94304
GENERIC: ALPHA-1-PROTEINASE INHIBITOR (ALPHA-1 PI) TRADE: PROLASTIN*/**	REPLACEMENT THERAPY IN THE ALPHA-1 PI CONGENITAL DEFICIENCY STATE. [DEC 02, 1994]	CUTTER LABORATORIES P.O. BOX 1986 BERKELEY, CA 94701
GENERIC: ANCROD TRADE: ARVIN	FOR USE AS AN ANTITHROMBOTIC IN PATIENTS WITH HEPARIN-INDUCED THROMBOCYTOPENIA OR THROMBOSIS, WHO REQUIRE IMMEDIATE AND CONTINUED ANTICOAGULATION.	KNOLL PHARMACEUTICALS 30 NORTH JEFFERSON RD. WHIPPANY, NJ 07981
GENERIC: ANTIHEMOPHILIC FACTOR (RECOMBINANT) TRADE: NOT ESTABLISHED	PROPHYLAXIS AND TREATMENT OF BLEEDING IN INDIVIDUALS WITH HEMOPHILIA A OR FOR PROPHYLAXIS WHEN SURGERY IS REQUIRED IN INDIVIDUALS WITH HEMOPHILIA A.	MILES, INC. CUTTER BIOLOGICAL ELKHART, IN 46515

BIOLOGICAL DESIGNATIONS

NAME OF BIOLOGICAL	DESIGNATED USE [EXCLUSIVITY EXPIRATION DATE]	SPONSOR NAME AND ADDRESS
GENERIC: ANTIMELANOMA ANTIBODY XMMME-001-RTA TRADE: SAME AS GENERIC	TREATMENT OF STAGE III MELANOMA NOT AMENABLE TO SURGICAL RESECTION.	XOMA CORP. 3516 SACRAMENTO ST. SAN FRANCISCO, CA 94118
GENERIC: ANTI-TAP-72 IMMUNOTOXIN TRADE: XOMAZYME-791	TREATMENT OF METASTATIC COLORECTAL ADENOCARCINOMA.	XOMA CORP. 2910 SEVENTH STREET BERKELEY, CA 94710
GENERIC: ANTITHROMBIN III (AT-III) TRADE: NOT ESTABLISHED	REPLACEMENT THERAPY IN CONGENITAL DEFICIENCY OF AT-III FOR PREVENTION AND TREATMENT OF THROMBOSIS AND PULMONARY EMBOLI.	CUTTER LABORATORIES P.O. BOX 1986 BERKELEY, CA 94701
GENERIC: ANTITHROMBIN III CONCENTRATE I.V. TRADE: KYBERNIN	PROPHYLAXIS AND TREATMENT OF THROMBOEMBOLIC EPISODES IN PATIENTS WITH GENETIC AT-III DEFICIENCY.	HOECHST-ROUSSEL ROUTE 202-206 NORTH SOMERVILLE, NJ 08876
GENERIC: ANTITHROMBIN III (HUMAN) TRADE: ANTITHROMBIN III (HUMAN)	PREVENTING OR ARRESTING EPISODES OF THROMBOSIS IN PATIENTS WITH CONGENITAL ANTITHROMBIN III DEFICIENCY AND/OR TO PREVENT THE OCCURRENCE OF THROMBOSIS IN PATIENTS WITH ANTITHROMBIN III DEFICIENCY WHO HAVE UNDERGONE TRAUMA OR WHO ARE ABOUT TO UNDERGO SURGERY OR PARTURITION.	AMERICAN NATIONAL RED CROSS 17TH AND E STREETS, N.W. WASHINGTON, DC 20006
GENERIC: ANTITHROMBIN III (HUMAN) TRADE: ATNATIV*/**	HEREDITARY AT-III DEFICIENCY IN CONNECTION WITH SURGICAL OR OBSTETRICAL PROCEDURES OR WHEN THEY SUFFER FROM THROMBOEMBOLISM. [DEC 13, 1996]	KABI VITRUM, INC. 160 INDUSTRIAL DR. FRANKLIN, CA 45005
GENERIC: BENZYLPENICILLIN, BENZYLPENICILLOIC ACID, AND BENZYLPENILLOIC ACID TRADE: PRE-PEN/MDM	ASSESSING THE RISK OF ADMINISTRATING PENICILLIN WHEN IT IS THE PREFERRED DRUG OF CHOICE IN ADULT PATIENTS WHO HAVE PREVIOUSLY RECEIVED PENICILLIN AND HAVE A HISTORY OF CLINICAL HYPERSENSITIVITY.	KREMERS-URBAN CO. P.O. BOX 2038 MILWAUKEE, WI 53201
GENERIC: BOTULINUM A TOXIN TRADE: OCULINUM	TREATMENT OF STRABISMUS ASSOCIATED WITH DYSTONIA IN ADULTS (PATIENTS 12 YEARS OF AGE AND ABOVE). TREATMENT OF BLEPHAROSPASM ASSOCIATED WITH DYSTONIA IN ADULTS (PATIENTS 12 YEARS OF AGE AND ABOVE).	ALAN B. SCOTT, M.D. 2232 WEBSTER ST. SAN FRANCISCO, CA 94115
GENERIC: BOTULINUM TOXIN TRADE: ORTHOLINUM	TREATMENT OF SPASMODIC TORTICOLLIS.	ALAN B. SCOTT, M.D. 2232 WEBSTER ST. SAN FRANCISCO, CA 94115
GENERIC: BOTULISM IMMUNE GLOBULIN TRADE: BOTULISM IMMUNE GLOBULIN	TREATMENT OF INFANT BOTULISM.	CALIFORNIA DEPT. OF HEALTH SERVICES 2151 BERKELEY WAY BERKELEY, CA 94704
GENERIC: CD4, HUMAN RECOMBINANT SOLUBLE TRADE: NOT ESTABLISHED	TREATMENT OF AIDS RESULTING FROM INFECTION WITH HIV.	GENENTECH, INC. 460 POINT SAN BRUNO BLVD. SOUTH SAN FRANCISCO, CA 94080

FDA data supplied by DrugPatentWatch.com

ORPHAN DRUG PRODUCT DESIGNATIONS

BIOLOGICAL DESIGNATIONS

NAME OF BIOLOGICAL	DESIGNATED USE [EXCLUSIVITY EXPIRATION DATE]	SPONSOR NAME AND ADDRESS
GENERIC: CD4, HUMAN RECOMBINANT SOLUBLE TRADE: RECEPTIN	TREATMENT OF ACQUIRED IMMUNODEFICIENCY SYNDROME (AIDS).	BIOGEN, INC. 14 CAMBRIDGE CENTER CAMBRIDGE, MA 02142
GENERIC: CD4, HUMAN TRUNCATED-369 AA POLYPEPTIDE (RECOMBINANT CHO CELLS) TRADE: SOLUBLE T4	TREATMENT OF ACQUIRED IMMUNODEFICIENCY SYNDROME (AIDS).	SMITH KLINE & FRENCH LABORATORIES 1500 SPRING GARDEN ST. PHILADELPHIA, PA 19101
GENERIC: CD5-T LYMPHOCYTE IMMUNOTOXIN TRADE: XOMAZYME-H65	FOR EX-VIVO TREATMENT TO ELIMINATE MATURE T CELLS FROM POTENTIAL BONE MARROW GRAFTS. FOR IN VIVO TREATMENT OF BONE MARROW RECIPIENTS TO PREVENT GRAFT REJECTION AND GRAFT VS HOST DISEASE (GVHD). TREATMENT OF GRAFT VS HOST DISEASE (GVHD) AND/OR REJECTION IN PATIENTS WHO HAVE RECEIVED BONE MARROW TRANSPLANTS.	XOMA CORP. 2910 SEVENTH ST. BERKELEY, CA 94710
GENERIC: CLOSTRIDIUM BOTULINUM, TYPE A TRADE: DYSPORT	TREATMENT OF ESSENTIAL BLEPHAROSPASM.	PORTON INTERNATIONAL 727 FIFTEENTH STREET, N.W. WASHINGTON, DC 20005
GENERIC: CYTOMEGALOVIRUS IMMUNE GLOBULIN (HUMAN) TRADE: NOT ESTABLISHED	PREVENTION OR ATTENUATION OF PRIMARY CYTOMEGALOVIRUS DISEASE IN IMMUNOSUPPRESSED RECIPIENTS OF ORGAN TRANSPLANTS.	MASSACHUSETTS PUBLIC HEALTH BIOLOGIC LABS 305 SOUTH ST. JAMAICA PLAIN, MA 02130
GENERIC: DIGOXIN IMMUNE FAB (OVINE) TRADE: DIGIDOTE	LIFE-THREATENING ACUTE CARDIAC GLYCOSIDE INTOXICATION MANIFESTED CONDUCTION DISORDERS, ECTOPIC VENTRICULAR ACTIVITY AND (IN SOME CASES) HYPERKALEMIA.	BOEHRINGER MANNHEIM 1301 PICCARD DR. ROCKVILLE, MD 20850
GENERIC: DIGOXIN IMMUNE FAB (OVINE) TRADE: DIGIBIND*/**	TREATMENT OF POTENTIALLY LIFE-THREATENING DIGITALIS INTOXICATION IN PATIENTS WHO ARE REFRACTORY TO MANAGEMENT BY CONVENTIONAL THERAPY. [APR 22, 1993]	BURROUGHS WELLCOME 3030 CORNWALLIS ROAD RESEARCH TRIANGLE PARK, NC 27709
GENERIC: EPOETIN ALFA (RECOMBINANT-HUMAN) TRADE: EPOGEN*/**	TREATMENT OF ANEMIA ASSOCIATED WITH CHRONIC RENAL FAILURE, INCLUDING PATIENTS ON DIALYSIS (END STAGE RENAL DISEASE) AND PATIENTS NOT ON DIALYSIS. [JUN 01, 1996]	AMGEN 1900 OAK TERRACE LANE THOUSAND OAKS, CA 91320
GENERIC: ERWINIA L-ASPARAGINASE TRADE: NOT ESTABLISHED	TREATMENT OF ACUTE LYMPHOCYTIC LEUKEMIA (ALL).	PORTON PRODUCTS, LTD. 5445 BALBOA BLVD., SUITE 115 ENCINO, CA 91316
GENERIC: ERYTHROPOIETIN (RECOMBINANT-HUMAN) TRADE: EPOCH	TREATMENT OF ANEMIA ASSOCIATED WITH END STAGE RENAL DISEASE (ESRD).	CHUGAI PHARMACEUTICALS 1-9, KYOBASHI 2-CHOME, CHU TOKYO 104, JAPAN

VERAPAMIL (TABLET)	JUL 18, 1985	

FDA data supplied by DrugPatentWatch.com

THE FOLLOWING ARE TWO LISTS OF PETITIONS FILED UNDER SECTION 505(j)(2)(C) OF THE ACT WHERE THE AGENCY HAS DETERMINED THAT THE REFERENCED PRODUCT: (1) IS SUITABLE FOR SUBMISSION AS AN ANDA (PETITIONS APPROVED) OR (2) IS NOT SUITABLE FOR SUBMISSION AS AN ANDA (PETITIONS DENIED). THE DETERMINATION THAT AN ANDA WILL BE APPROVED IS NOT MADE UNTIL THE ANDA ITSELF IS SUBMITTED AND REVIEWED BY THE AGENCY. A COPY OF EACH PETITION IS LISTED BY DOCKET NUMBER ON PUBLIC DISPLAY IN FDA'S DOCKETS MANAGEMENT BRANCH, HFA-305, ROOM 4-62, 5600 FISHERS LANE, ROCKVILLE, MD 20857.

PETITIONS APPROVED

DRUG NAME DOSAGE FORM; ROUTE	STRENGTH (CONTAINER SIZE)	DOCKET NUMBER	PETITIONER	REASON FOR PETITION	STATUS
ACETAMINOPHEN SUPPOSITORY; RECTAL	80MG	85 P-0403/CP	UPSHER SMITH	NEW STRENGTH	APPROVED OCT 16, 1985
ACETAMINOPHEN; ASPIRIN; CODEINE PHOSPHATE TABLET; ORAL	325MG 325MG 30MG	86 P-0361/CP	BOCK PHARMA	NEW DOSAGE FORM NEW STRENGTH	APPROVED DEC 16, 1987
ACETAMINOPHEN; BUTALBITAL; CAFFEINE CAPSULE; ORAL	500MG 50MG 40MG	89 P-0345/CP	MALLARD	NEW DOSAGE FORM	APPROVED OCT 27, 1989
ACETAMINOPHEN; CODEINE PHOSPHATE CAPSULE; ORAL	500MG 30MG	84 P-0228/CP	RW JOHNSON	NEW DOSAGE FORM NEW STRENGTH	APPROVED JUN 02, 1986
ACETAMINOPHEN; CODEINE PHOSPHATE CAPSULE; ORAL	500MG 60MG	84 P-0228/CP	RW JOHNSON	NEW DOSAGE FORM NEW STRENGTH	APPROVED JUN 02, 1986
ACETAMINOPHEN; CODEINE PHOSPHATE CAPSULE; ORAL	650MG 15MG	86 P-0200/CP	MIKART	NEW DOSAGE FORM NEW STRENGTH	APPROVED OCT 03, 1986
ACETAMINOPHEN; CODEINE PHOSPHATE SOFT GELATIN CAPSULE; ORAL	300MG 30MG	85 P-0543/CP	SOFTAN	NEW DOSAGE FORM	APPROVED MAR 18, 1986
ACETAMINOPHEN; CODEINE PHOSPHATE SOFT GELATIN CAPSULE; ORAL	500MG 7.5MG	85 P-0543/ CP0002	SOFTAN	NEW DOSAGE FORM NEW STRENGTH	APPROVED MAR 19, 1986

PATENT AND EXCLUSIVITY INFORMATION ADDENDUM

This Addendum identifies drugs that qualify under the Drug Price Competition and Patent Term Restoration Act (1984 Amendments) for periods of exclusivity, during which abbreviated new drug applications (ANDAs) and applications described in Section 505(b)(2) of the Federal Food, Drug, and Cosmetic Act (the Act) for those drugs may not be submitted or made effective as described below, and provides patent information concerning the listed drugs. This section is arranged in alphabetical order by active ingredient name. For those products with multiple active ingredients, only the first active ingredient (in alphabetical order) will appear. For an explanation of the codes used in the *Addendum*, see the *Exclusivity Terms* page. Exclusivity prevents the submission or effective approval of ANDAs or applications described in Section 505(b)(2) of the Act. It does not prevent the submission or approval of a second full NDA. Applications qualifying for periods of exclusivity are:

(1) A new drug application approved between January 1, 1982 and September 24, 1984, for a drug product all active ingredients (including any ester or salt of the active ingredient) of which had never been approved in any other application under Section 505(b) of the Act. Approval of an ANDA or an application described in Section 505(b)(2) of the Act for the same drug may not be *made effective* for a period of *ten years* from the date of the approval of the original application.

(2) A new drug application approved after September 24, 1984, for a drug product all active ingredients (including any ester or salt of the active ingredient) of which had never been approved in any other new drug application under Section 505(b) of the Act. Generally, no subsequent ANDA or application described in Section 505(b)(2) of the Act for the same drug may be *submitted* for a period of *five years* from the date of approval of the original application, except that such an application may be *submitted* after *four years* if it contains a certification that a patent claiming the drug is invalid or will not be infringed by the product for which approval is sought.

(3) A new drug application approved after September 24, 1984, for a drug product containing an active ingredient (including any ester or salt of that active ingredient) that has been approved in an earlier new drug application and that includes reports of new clinical investigations (other than bioavailability studies). Such investigations must have been conducted or sponsored by the applicant and must have been essential to approval of the application. If these requirements are met, the approval of a subsequent ANDA or an application described in Section 505(b)(2) of the Act may not be *made effective* for the same drug or use, if for a new indication, before the expiration of *three years* from the date of approval of the original application. If an applicant has exclusivity for a new use or indication, this does not preclude the approval of an ANDA application or 505(b)(2) application for the drug product with indications not covered by the exclusivity.

(4) A supplement to a new drug application for a drug containing a previously approved active ingredient (including any ester or salt of the active ingredient) approved after September 24, 1984, that contains reports of new clinical investigations (other than bioavailability studies) essential to the approval of the supplement and conducted or sponsored by the applicant. The approval of a subsequent application for a change approved in the supplement may not be *made effective* for *three years* from the date of approval of the original supplement.

The Act required approved new drug applications to be supplemented with certain patent information by October 24, 1984. Patent information must now be filed with all newly submitted drug applications, and no NDA may be approved after September 24, 1984, without the pertinent patent information. The patent numbers and the expiration dates of appropriate patents claiming drugs that are the subject of approved NDAs will be published in this Addendum or in the monthly Cumulative Supplement to this publication. Patent information on unapproved applications or on patents (i.e., process or manufacturing patents) beyond the scope of the Act will not be published.

The patents that FDA regards as covered by the statutory provisions for submission of patent information are: patents that claim the active ingredient or ingredients; drug product patents, which include formulation/composition patents; and use patents for a particular approved indication or method of using the product. NDA holders or applicants amending or supplementing applications with formulation/composition patent information are asked to certify that the patent(s) is appropriate for publication and refers to an approved product or one for which approval is being sought. The Agency has asked all applicants or

FDA data supplied by DrugPatentWatch.com

application holders of use patents to provide information as to the indications covered by such patents. This information will be included in the Cumulative Supplement to the List as it becomes available.

Title I of the Act does not apply to products submitted or approved under Section 507 of the Federal Food, Drug, and Cosmetic Act (antibiotic products). Therefore, (1) applicants submitting abbreviated applications for antibiotic products are not required to provide the patent certification statement that must be included in ANDAs, (2) antibiotic products are not considered eligible for exclusivity protection, and (3) holders of approved applications for antibiotic products need not submit the patent information as required of NDA application holders.

Since all parts of this publication are subject to changes, additions, or deletions, the *Addendum* must be used in conjunction with the most current Cumulative Supplement.
